(54) Title: OPTICAL GRADE MOULDING COMPOSITIONS HAVING INCREASED THERMAL STABILITY

(57) Abstract: The present invention relates to a copolymer having increased heat resistance, high transparency and low haze values. The invention further relates to moulding compositions comprising this copolymer and to a process for the manufacturing this copolymer. The moulding compositions of the present invention are highly suitable for the manufacturing of optical elements used in various optical devices including primary optics, secondary optics, tertiary optics as well as light guides.
