METHOD OF CUSTOM-TAILORING FOUNDATION GARMENT

ABSTRACT OF THE DISCLOSURE

A method of custom-tailoring a foundation garment suited to a customer, which comprises preliminarily preparing desired wearing data of the foundation garment collected from a multitude of persons and compensated to give a desired, well-proportioned figure and memorizing them in a computer memory; taking three-dimensionally nude size data of the customer in the overall body and subjecting the nude size data to computer graphics thus displaying 2-D and 3-D figures and dimensions of given body parts; simulating, while displaying, the nude size data on the basis of the desired wearing data from the memory thereby to obtain customer's compensated wearing data, corresponding to the nude size data, capable of giving an aesthetic well-proportioned figure; and making the foundation garment on the basis of the customer's compensated wearing data.
