(54) Title: FRAME, BASIC FRAMEWORK, MODULE, PROFILE AND SET OF STRUCTURAL ELEMENTS FOR MODULAR CONSTRUCTION AND A MODULAR-CONSTRUCTION BUILDING

Fig. 1

(57) Abstract: The invention relates to a frame, in particular a wall frame, which is intended for a preferably self-supporting basic framework of a module for modular construction and comprises two post profiles which can be arranged essentially vertically and of which the upper ends can be connected to one another via a ceiling profile and the lower ends can be connected to one another via a floor profile. The invention also relates to a basic framework, to a module, to a profile and to a set of structural elements for modular construction and also to a modular-construction building.
