(54) Title: IMPROVED WINDOW AND SYSTEM OF WINDOWS

(57) Abstract: An improved window for noise mitigation or reduction is provided. The window comprises a fixed main panel, and a plurality of side panels, the main panel having a surface displaced at a distance relative to the plurality of side panels. In some embodiments, this is achieved by pushing a fixed window panel outwards by a distance of a minimum of 150 millimetres (mm) to a maximum predetermined canopy depth value for structural stability. The distance is preferably between 200 to 600 mm relative to the adjacent window panels to the left and right of it.
