FIG. 1

Figure 2 Comparison of exposure (AUC) to aliskiren in pediatric patients 12-17 years old and healthy adults

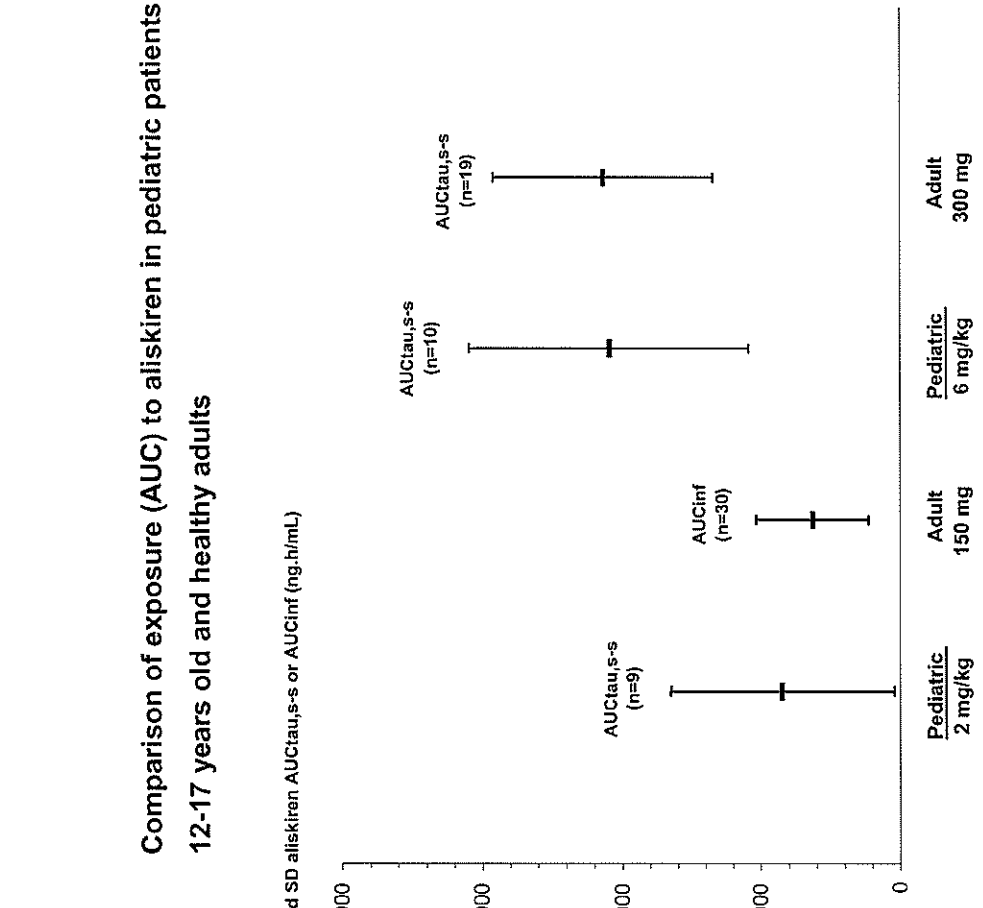

Figure 3 Comparison of exposure (Cmax) to aliskiren in pediatric patients of 12-17 years old and healthy adults

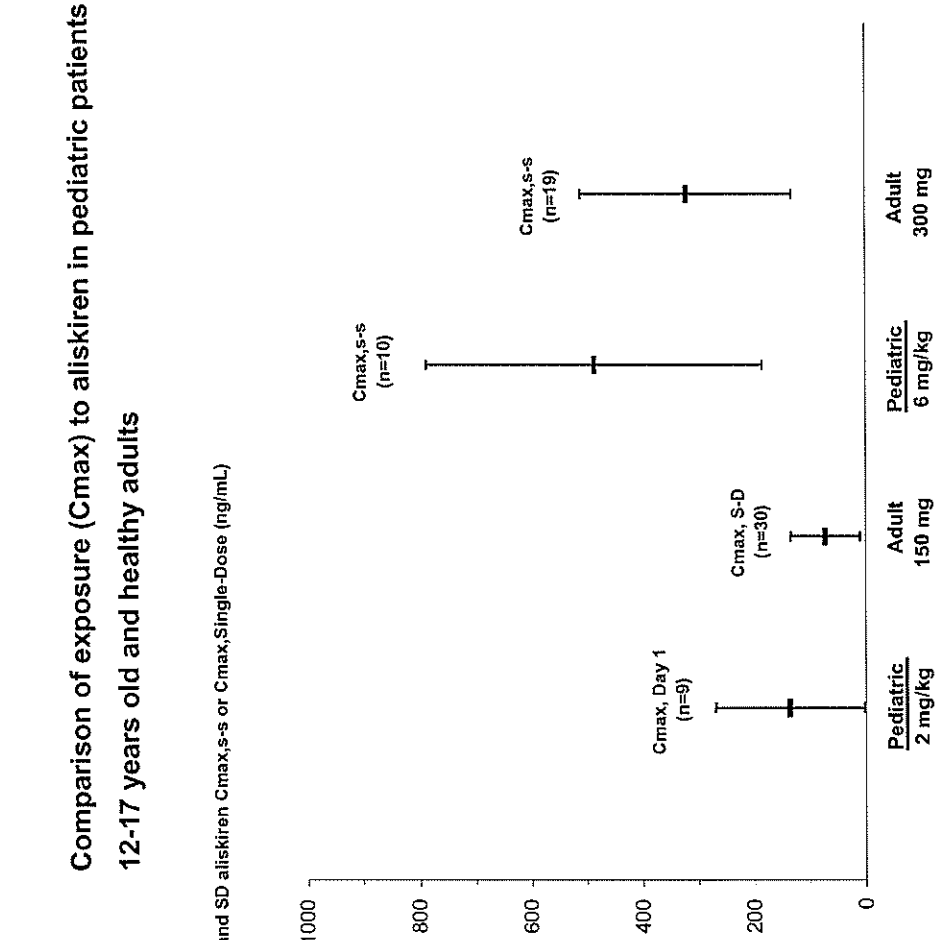

Figure 4 Comparison of exposure (AUC) to aliskiren in pediatric patients of 6-11 years old and healthy adults

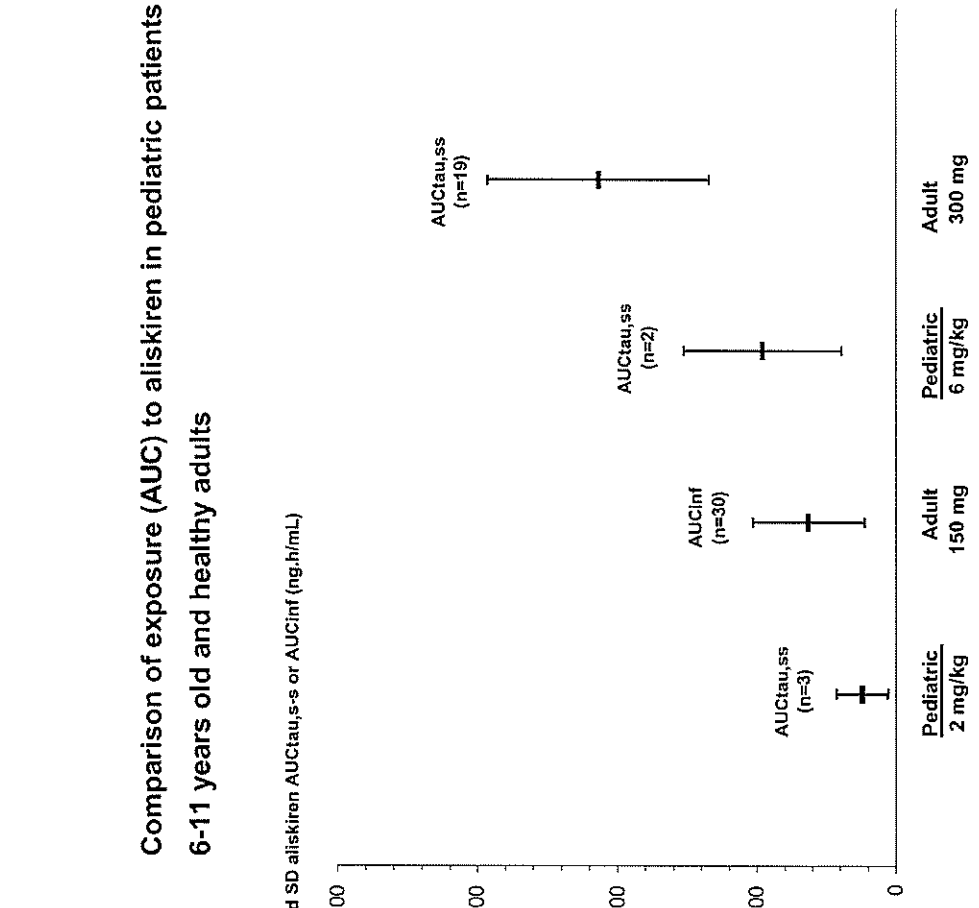

Figure 5 Comparison of exposure (Cmax) to aliskiren in pediatric patients of 6-11 years old and healthy adults

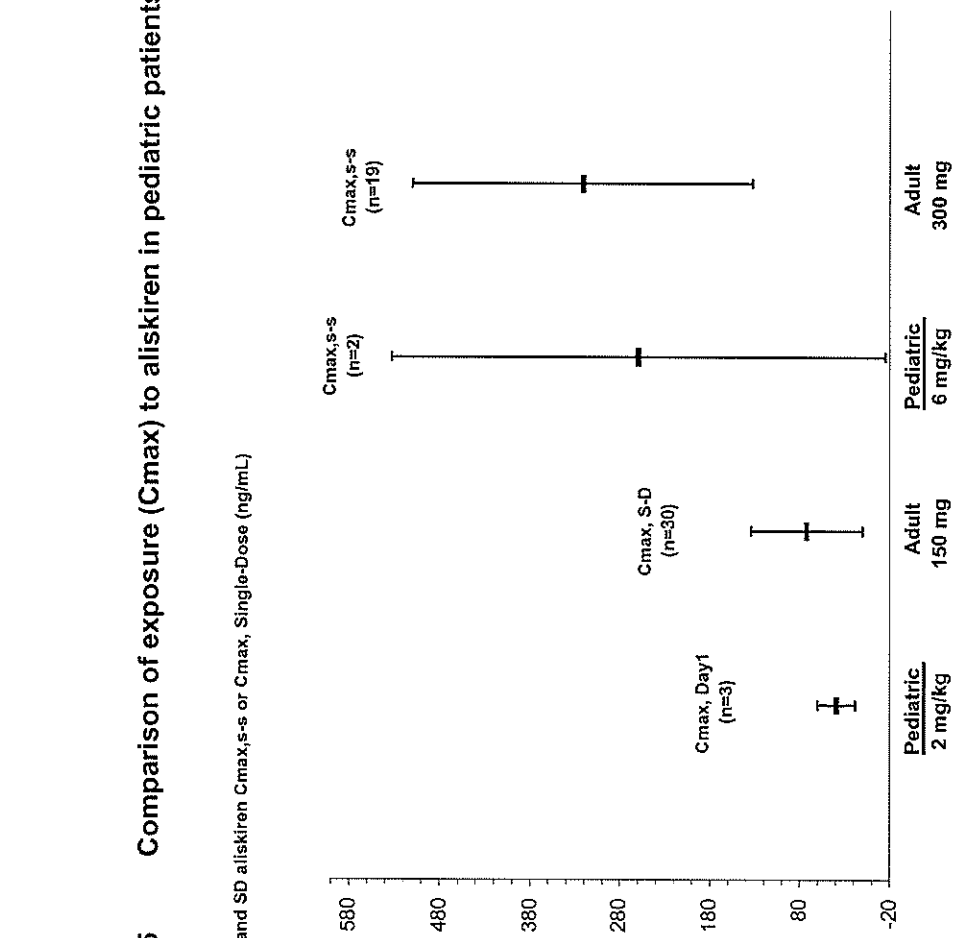

Figure 6 Mean (±SD) (n=9) plasma concentration v time profiles for the dose of 2 mg/kg in pediatric patients of 12-17 years old

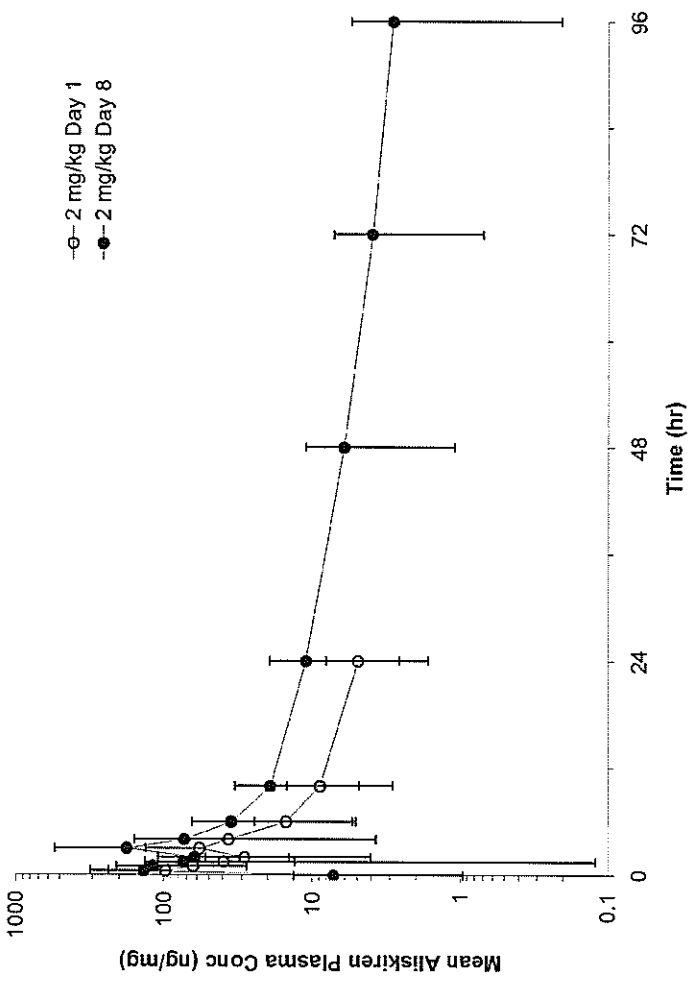

Figure 7 Mean (±SD) (n=10) plasma concentration v time profiles for the dose of 6 mg/kg in pediatric patients of 12-17 years old

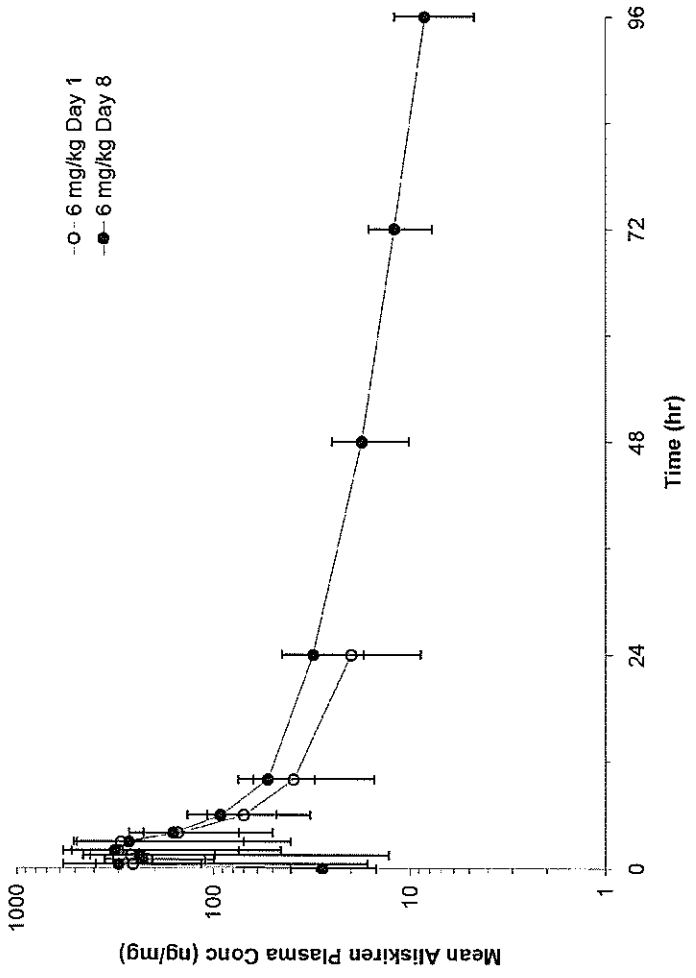

Figure 8 Mean (±SD) (n=9 for 2 mg/kg; n=10 for 6 mg/kg) plasma concentration v time profiles for the doses of 2 mg/kg and 6 mg/kg in pediatric patients of 12-17 years old on Day 1

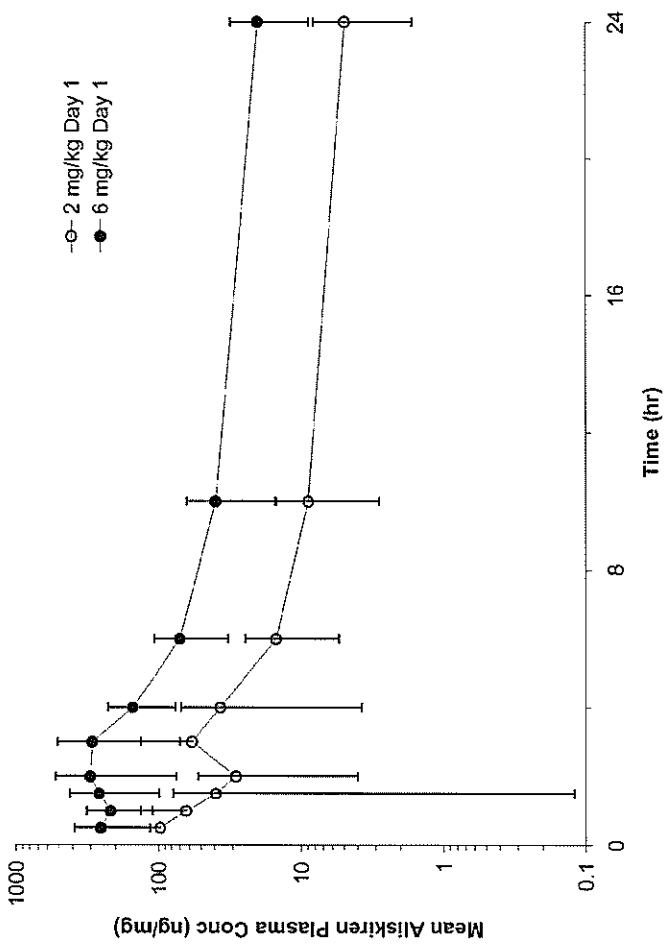

Figure 9 Mean (±SD) (n=9 for 2 mg/kg; n=10 for 6 mg/kg) plasma concentration v time profiles for the doses of 2 mg/kg and 6 mg/kg in pediatric patients of 12-17 years old on Day 8

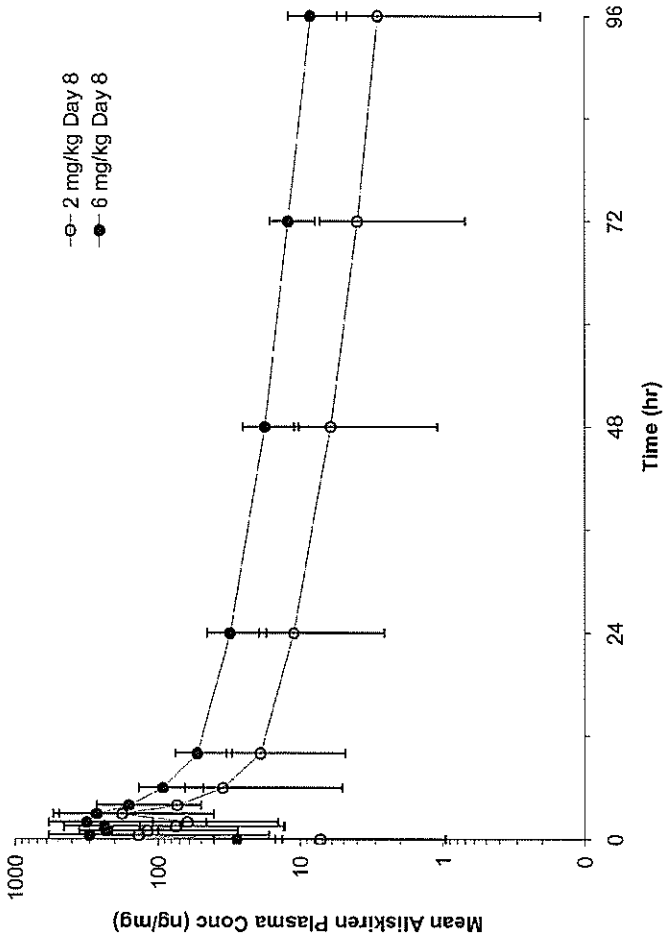

Figure 10 Mean (±SD) (n=3) plasma concentration v time profiles for the dose of 2 mg/kg in pediatric patients of 6-11 years old

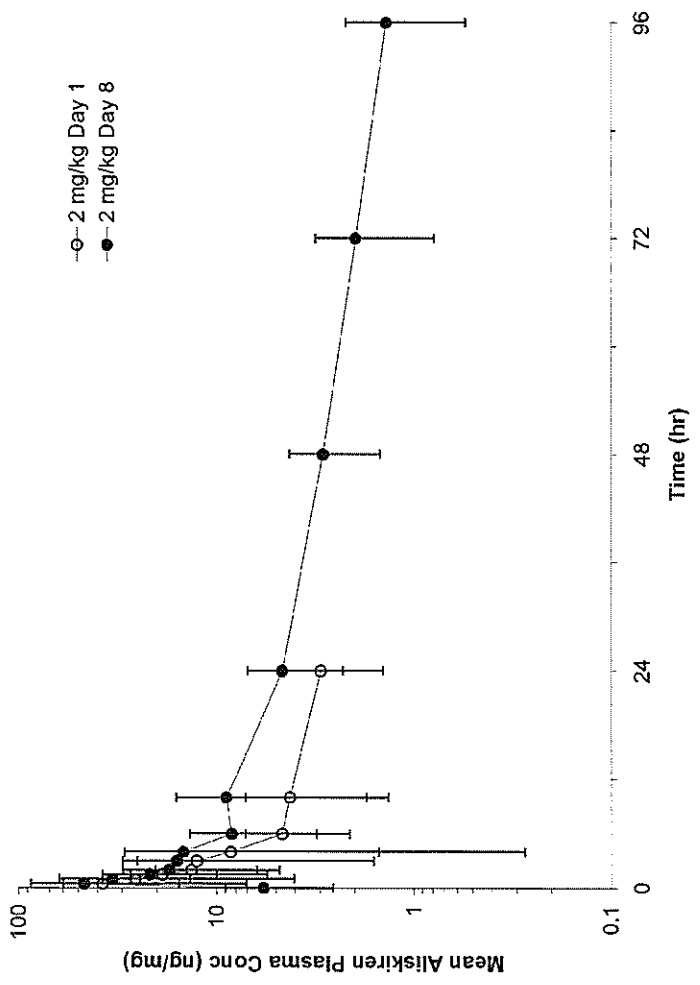

Figure 11 Mean (±SD) (n=2) plasma concentration v time profiles for the dose of 6 mg/kg in pediatric patients of 6-11 years old

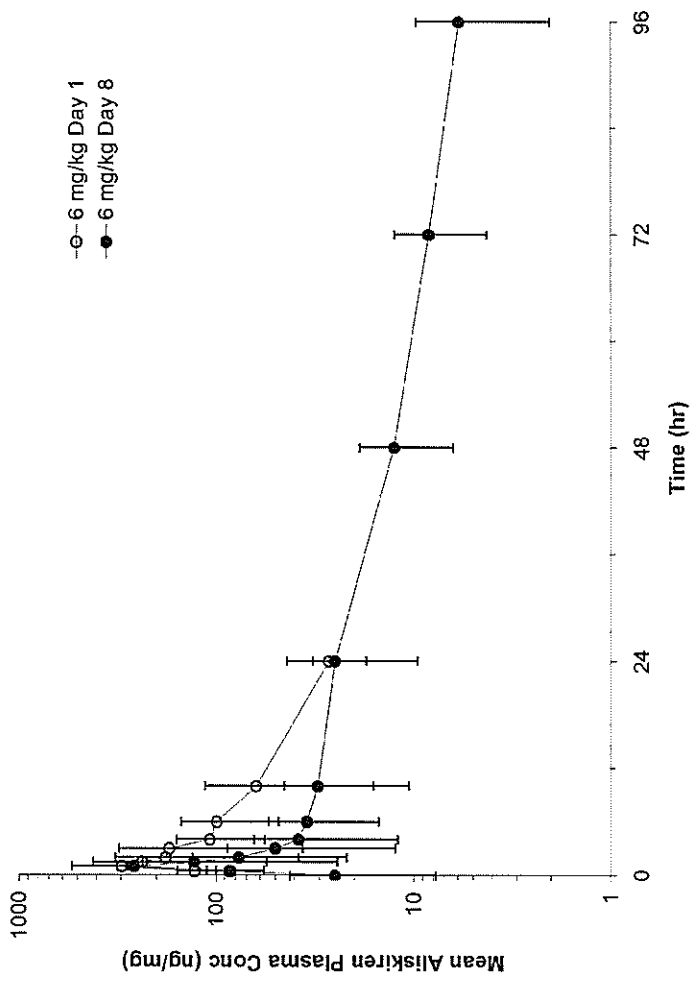

Figure 12 Mean (±SD) (n=3 for 2 mg/kg, n=2 for 6 mg/kg) plasma concentration vs time profiles for the doses of 2 mg/kg and 6 mg/kg in pediatric patients of 6-11 years old on Day 1

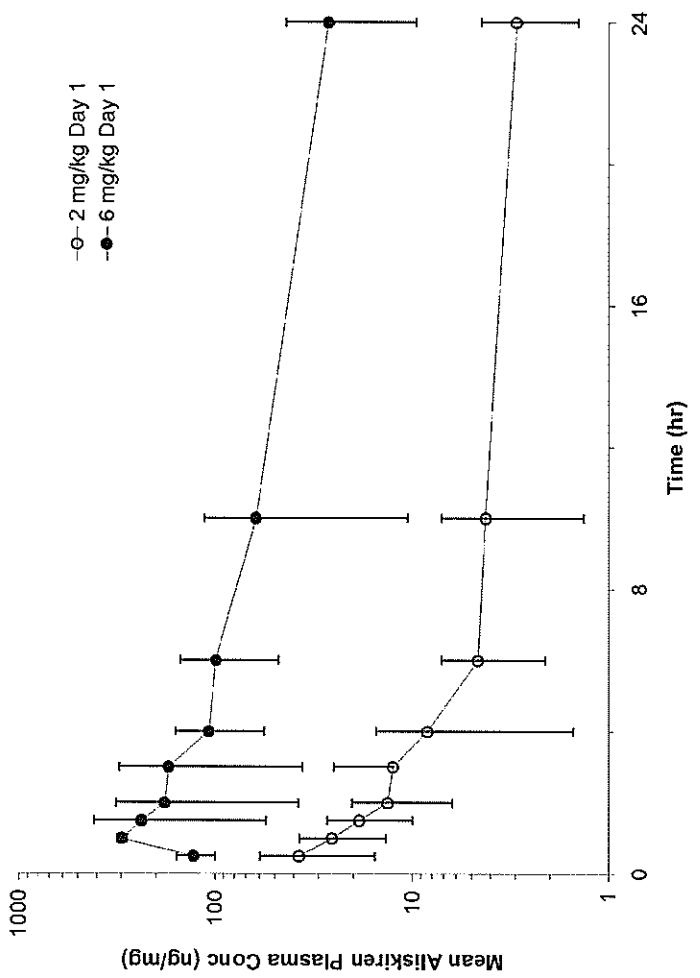

Figure 13 Mean (±SD) (n=3 for 2 mg/kg, n=2 for 6 mg/kg) plasma concentration v time profiles for the doses of 2 mg/kg and 6 mg/kg in pediatric patients of 6-11 years old on Day 8
