

TITLE:

DISPLAY APPARATUS AND MANUFACTURING METHOD THEREOF

ABSTRACT

5

A display apparatus includes a driving backplane, light-emitting elements and residual glue structures. The light emitting elements are bonded to the driving backplane. Each of the residual glue structures covers at least one portion of a side wall of a corresponding light-emitting element. In a top view of the display apparatus, a residual glue
10 structure has an edge beyond a light-emitting element, and the edge is irregular. In addition, a manufacturing method of the display apparatus is also provided.
