

ABSTRACT

**Chemically Reinforced Glass Manufacture Method, Information
Recording Medium Glass Substrate Manufacture Method,
5 Information Recording Medium Manufacture Method, and Chemical
Reinforcement Device**

In order to prevent particles generated in the preparation of a chemically reinforcing molten salt from
10 getting into an operation atmosphere for performing a chemical reinforcement, a chemical reinforcement tank 2 and a dissolution tank 10 for preparing the chemically reinforcing molten salt are separated from each other. In a typical embodiment, the chemical reinforcement tank is disposed in a
15 clean room 35, and the dissolution tank 10 is disposed outside the clean room.
