

ABSTRACT**Underground distribution system for the distribution of goods in an urban environment**

Underground distribution system (1) for the distribution of goods in an urban environment, comprising:

- at least one micro-tunnel (2) forming at least one loop (7), extending under the foundations of preexisting surface buildings and/or infrastructures, in which goods, the transportation of which is automated, circulate,
- a plurality of exchange stations (4; 6) exchanging with the surface, each comprising a shaft allowing goods to be lowered down to the micro-tunnel (2) and raised back up after they have been transported within the micro-tunnel.
