

ABSTRACT

A method for controlling a virtual object to pick up a virtual prop, and a terminal and a storage medium, which belong to the technical field of human-computer interaction. The method comprises: displaying a prop pick-up list (201); receiving an operation for a first prop pick-up control in the prop pick-up list (202); and on the basis of a pick-up mode indicated by the operation, controlling a virtual object to pick up a first virtual prop (203). By means of the method, the pick-up operation of a virtual prop can be simplified, thereby improving the prop pick-up efficiency.
