

ABSTRACT

The hermetic terminal assembly structure is adapted to be sealed along the periphery of an aperture (3) in a chamber defining housing wall (4) of a hermetically sealed chamber including a terminal pin (16) sealed by a coalescent aperture seal (21) in the aperture (3) to include inner and outer pin portions (17, 18), each of which pin portions (17, 18) is surrounded by one of a pair of sleeve members (22,23) sealingly cooperative with the aperture seal (21).
