ABSTRACT

TRANSDERMAL THERAPEUTIC SYSTEM COMPRISING THE INGREDIENT ROTIGOTINE AND AT LEAST ONE NON-AMINE-RESISTANT SILICONE ADHESIVE

The invention relates to a transdermal therapeutic system (TTS) for the administration of the active ingredient rotigotine comprising a matrix layer containing rotigotine, one or more non-amine-resistant silicone adhesives in an amount of more than 50% by weight, based on the total weight of the pressure sensitive adhesive of the matrix layer, and paraffin, as well as methods for the preparation thereof. The transdermal therapeutic system according to the invention is particularly suitable for the treatment of the Parkinson disease.
