

ABSTRACT

METHOD AND APPARATUS FOR DETECTING BLOCKING STATE OF IMAGE ACQUISITION DEVICE, DEVICE AND STORAGE MEDIUM

Embodiments of the present disclosure provide a method and apparatus for detecting a blocking state of an image acquisition device, a device, and a computer storage medium. The method includes: obtaining an image acquired by an image acquisition device; and determining, according to the acquired image, whether the image acquisition device is in a blocked state. In this way, in the embodiments of the present disclosure, whether an image acquisition device is blocked can be determined according to an image acquired by the image acquisition device, thus facilitating the implementation of blocking determination, so that whether the image acquisition device is blocked can be found out in time, so as to facilitate determining whether the acquired image is valuable for use and to facilitate application of the acquired image in a specific scenario.
