SEROTONIN–NOREPINEPHRINE REUPTAKE INHIBITORS (SNRIs) AND SIGMA RECEPTOR LIGANDS COMBINATIONS

FIELD OF THE INVENTION

The present invention relates to an active substance combination, pharmaceutical compositions containing it and their use in medicine, particularly for the prophylaxis and/or treatment of pain.

BACKGROUND

The treatment of pain conditions is of great importance in medicine. There is currently a world-wide need for additional pain therapy. The pressing requirement for a specific treatment of pain conditions is documented in the large number of scientific works that have appeared recently in the field of applied analgesics.

PAIN is defined by the International Association for the Study of Pain (IASP) as "an unpleasant sensory and emotional experience associated with actual or potential tissue damage, or described in terms of such damage" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (2002), 210). Although it is a complex process influenced by both physiological and psychological factors and is always subjective, its causes or syndromes can be classified. Pain can be classified based on temporal, aetiological or physiological criteria. When pain is classified by time, it can be acute or chronic. Aetiological classifications of pain are malignant or non-malignant. A third classification is physiological, which includes nociceptive pain (results from detection by specialized transducers in tissues attached to A-delta and C-fibers), that can be divided into somatic and visceral types of pain, and neuropathic pain (results from irritation or damage to the nervous system), that can be divided into peripheral and central neuropathic pain. Pain is a normal physiological reaction of the somatosensory system to noxious stimulation which alerts the individual to actual or potential tissue damage. It serves a protective function of informing us of injury or disease, and usually remits when healing is complete or the condition is cured. However, pain may result from a pathological state characterized by one or more of the following: pain in the absence of a noxious stimulus (spontaneous pain), increased duration of response to brief stimulation (ongoing pain or hyperpathia), reduced pain threshold (allodynia), increased responsiveness to suprathreshold stimulation (hyperalgesia), spread of pain and hyperalgesia to uninjured tissue (referred pain and secondary hyperalgesia), and abnormal sensations (e.g., dysesthesia, paresthesia).

Serotonin–Norepinephrine Reuptake Inhibitors (SNRIs) are a class of antidepressant drugs used in the treatment of major depression and other mood disorders that increase the levels of both serotonin and norepinephrine by inhibiting their reabsorption (reuptake) into cells in the CNS (Central Nervous System). There have been numerous studies demonstrating the analgesic effect of antidepressants, providing evidence that antidepressants are beneficial in the treatment of so-called

'chronic pain'. The precise mechanisms involved in the pathogenesis of persistent pain states are not fully understood, but there is growing recognition that the disinhibition and imbalance of serotonin and norepinephrine in endogenous pain inhibitory pathways may contribute to persistent pain (Sussman, 2003; Marks et al., 2009).

Venlafaxine is the first and most commonly used SNRI. It was introduced by Wyeth in 1994. The reuptake effects of venlafaxine are dose-dependent. At low doses it acts only on serotonergic transmission, at moderate doses it acts on serotonergic and noradrenergic systems, whereas at high doses, it can also affect dopaminergic neurotransmission (Marks et al., 2009). Desvenlafaxine, Duloxetine, Milnacipram, Levomilnacipram, Sibutramine or Bicifadine are other known SNRIs, besides Venlafaxine.

Clinical indications of SNRIs include major depressive disorder (MDD), generalized anxiety disorder (GAD), social anxiety disorder (SAD), panic disorder, neuropathic pain, fibromyalgia and chronical musculoskeletal pain.

There have been reported a number of side effects associated with SNRIs. The most common include loss of appetite, weight, and sleep. There may also be drowsiness, dizziness, fatigue, headache, increase in suicidal thoughts, emesis, nausea/vomiting, sexual dysfunction [including diminished interest in sex (libido) and difficulty reaching climax (anorgasmia)], and urinary retention. Elevation of norepinephrine levels can sometimes cause anxiety, mildly elevated pulse, and elevated blood pressure. People at risk for hypertension and heart disease should have their blood pressure monitored. Thus therapeutic utility of SNRIs is limited by undesirable adverse effects.

Two subtypes of Sigma receptors (Sigma-1 and Sigma-2 receptors) have been identified (Cobos et al., 2008). Confused with opioid receptors for many years due to the cross-reactivity of some ligands, the Sigma-1 receptor is a 24-kDa molecular mass protein of 223 amino acids anchored to the endoplasmic reticulum and plasma membranes (Cobos et al., 2008; Maurice and Su, 2009). Sigma-1 receptor is a unique ligand-regulated molecular chaperone which is activated under stress or pathological conditions and interacts with several neurotransmitter receptors and ion channels to modulate their function. The effects reported preclinically with Sigma-1 receptor ligands are consistent with a role for Sigma-1 receptor in central sensitization and pain hypersensitivity and suggest a potential therapeutic use of Sigma-1 receptor antagonists for the management of neuropathic pain as monotherapy (Romero et al., 2012).

Pyrazole derivatives of general formula (I) according to the present invention are described in WO 2006/021462 as compounds having pharmacological activity towards the sigma (σ) receptor useful, inter alia, in the prophylaxis and/or treatment of pain.

Pharmaceutical compositions (WO 2011/064296 A1), salts (WO 2011/064315 A1), polymorphs and solvates (WO 2011/095579 A1), and other solid forms (WO 2012/019984 A1) of said sigma ligands of formula (I) have been also disclosed as well as combinations with other active substances such a with opioids or opiates (WO 2009/130310 A1, WO 2012/016980 A2, WO 2012/072782 A1) or with chemotherapeutic drugs (WO 2011/018487 A1, WO 2011/144721 A1).

As mentioned above, therapeutic utility of SNRIs is limited by undesirable adverse effects including cardiovascular and gastrointestinal toxicity. Thus, strategies aimed to reduce doses needed for SNRIs indications, especially for analgesia, are desirable in order to improve their therapeutic window and extend their use in clinics.

BRIEF DESCRIPTION OF THE INVENTION

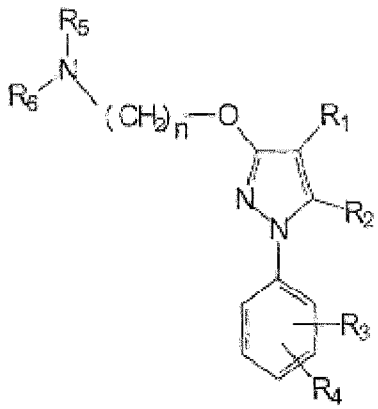

It is an object of the present invention to provide a medicament suitable for the prophylaxis and/or treatment of pain, which preferably does not show the undesired side effects of the SNRIs when used for the prophylaxis and/or treatment of pain, or at least less frequent and/or less pronounced.

The inventors of the present invention have found and demonstrated that the administration of some specific Sigma receptor ligands in conjunction with SNRIs surprisingly potentiates synergistically the analgesia.

In particular, the inventors of the present invention have found and demonstrated that the administration of some specific Sigma receptor ligands in conjunction with SNRIs potentiates synergistically the analgesic effect of the latter, indicating that the combination of a Sigma ligand and a SNRI reduces the doses of the latter needed to obtain effective analgesia.

Likewise, the inventors of the present invention have found and demonstrated that the administration of some specific Sigma receptor ligands in conjunction with SNRIs potentiates synergistically the analgesic effect of Sigma ligands.

Therefore, one aspect of the present invention relates to a synergistic combination comprising at least one Serotonin–Norepinephrine Reuptake Inhibitor (SNRI) and at least one Sigma ligand of general formula (I)

(I)

wherein,

R_1 is selected from the group consisting of hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl, substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted arylalkyl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted heterocyclylalkyl, $-COR_8$, $-C(O)OR_8$, $-C(O)NR_8R_9$, $-CH=NR_8$, $-CN$, $-OR_8$, $-OC(O)R_8$, $-S(O)_t-R_8$, $-NR_8R_9$, $-NR_8C(O)R_9$, $-NO_2$, $-N=CR_8R_9$, and halogen;

R_2 is selected from the group consisting of hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl, substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted arylalkyl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted heterocyclylalkyl, $-COR_8$, $-C(O)OR_8$, $-C(O)NR_8R_9$, $-CH=NR_8$, $-CN$, $-OR_8$, $-OC(O)R_8$, $-S(O)_t-R_8$, $-NR_8R_9$, $-NR_8C(O)R_9$, $-NO_2$, $-N=CR_8R_9$, and halogen;

R_3 and R_4 are independently selected from the group consisting of hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl, substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted arylalkyl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted heterocyclylalkyl, $-COR_8$, $-C(O)OR_8$, $-C(O)NR_8R_9$, $-CH=NR_8$, $-CN$, $-OR_8$, $-OC(O)R_8$, $-S(O)_t-R_8$, $-NR_8R_9$, $-NR_8C(O)R_9$, $-NO_2$, $-N=CR_8R_9$, and halogen, or together with the phenyl they form an optionally substituted fused ring system;

R_5 and R_6 are independently selected from the group consisting of hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl, substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted arylalkyl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted heterocyclylalkyl, $-COR_8$, $-C(O)OR_8$, $-C(O)NR_8R_9$, $-CH=NR_8$, $-CN$, $-OR_8$, $-OC(O)R_8$, $-S(O)_t-R_8$, $-NR_8R_9$, $-NR_8C(O)R_9$, $-NO_2$, $-N=CR_8R_9$, and halogen;

or together form, with the nitrogen atom to which they are attached, a substituted or unsubstituted, aromatic or non-aromatic heterocyclyl group;

n is selected from 1, 2, 3, 4, 5, 6, 7 and 8;

t is 0, 1 or 2;

R_8 and R_9 are each independently selected from hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl, substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted alkoxy, substituted or unsubstituted aryloxy, and halogen,

or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof.

More preferably, the Sigma ligands according to the present invention are selective Sigma-1 antagonist receptor ligands of above defined general formula (I) or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof.

Another aspect of this invention refers to the synergistic combination comprising at least one Sigma ligand of general formula (I) as defined above, or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof, and at least one SNRI for use in medicine.

Another aspect of this invention refers to the synergistic combination comprising at least one Sigma ligand of general formula (I) as defined above, or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof, and at least one SNRI for use in the prophylaxis and/or treatment of pain.

Another aspect of this invention refers to the use of the synergistic combination comprising at least one Sigma ligand of general formula (I) as defined above, or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof, and at least one SNRI for manufacturing a medicament for the prophylaxis and/or treatment of pain.

Another aspect of the invention is a method of treatment and/or prophylaxis of a patient suffering from pain, or likely to suffer pain, the method comprising administering to the patient in need of such a treatment or prophylaxis a therapeutically effective amount of a synergistic combination comprising at least one Sigma ligand of general formula (I) as defined above, or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof, and at least one SNRI.

Another aspect of this invention refers to the synergistic combination comprising at least one Sigma ligand of general formula (I) as defined above, or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof, and at least one SNRI for use in the prophylaxis and/or treatment of pain by potentiating the analgesic effect of the SNRI.

Another aspect of this invention refers to the use of the synergistic combination comprising at least one Sigma ligand of general formula (I) as defined above, or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof, and at least one

SNRI for manufacturing a medicament for the prophylaxis and/or treatment of pain by potentiating the analgesic effect of the SNRI.

Another aspect of this invention refers to the use of Sigma ligands of general formula (I) for potentiating the analgesic effect of SNRIs.

The pharmaceutical synergistic combination of the invention may be formulated for its simultaneous, separate or sequential administration.

These aspects and preferred embodiments thereof are additionally also defined hereinafter in the detailed description, as well as in the claims.

BRIEF DESCRIPTION OF THE FIGURES

Figure 1: Potentiation of venlafaxine analgesia (2.5 mg/kg) by compound 63·HCl (5, 10, 20, 40 and 80 mg/kg) in the mechanical allodynia of the post-operative pain model in rats. n=10, *: $p < 0.05$; ns: $p > 0.05$ Dunnett, compound 63·HCl + Venlafaxine vs. Venlafaxine.

Figure 2: Potentiation of a subactive dose of duloxetine (0.625 mg/kg) by compound 63·HCl (10, 20, 40 and 80 mg/kg) in the mechanical allodynia of the post-operative pain model in rats. n=10, *: $p < 0.05$; ns: $p > 0.05$ Dunnett, compound 63·HCl + Duloxetine vs. Duloxetine.

DETAILED DESCRIPTION OF THE INVENTION

The efficacy of the active components can sometimes be improved by addition of other (active) ingredients. More rarely, the observed efficacy of the combination of ingredients can be significantly higher than what would be expected from the amounts of the individual ingredients used, thus indicating potentiation of the activity of the components of the combination.

The present inventors have found that Sigma receptor ligands of general formula (I) are able to potentiate the analgesic effect of SNRIs.

In the context of the present invention, the following terms have the meaning detailed below.

"Alkyl" refers to a straight or branched hydrocarbon chain radical containing no unsaturation, and which is attached to the rest of the molecule by a single bond. Typical alkyl groups have from 1 to about 12, 1 to about 8, or 1 to about 6 carbon atoms, e. g., methyl, ethyl, n-propyl, i-propyl, n-butyl, t-butyl, n-pentyl, etc. Alkyl radicals may be optionally substituted by one or more substituents such as aryl, halo, hydroxy, alkoxy, carboxy, cyano, carbonyl, acyl, alkoxycarbonyl, heterocyclyl, amino, nitro, mercapto, alkylthio, etc. If substituted by aryl, it corresponds to an "arylalkyl" radical, such as benzyl or phenethyl. If substituted by heterocyclyl, it corresponds to a “heterocyclylalkyl” radical.

“Alkenyl” refers to a straight or branched hydrocarbon chain radical containing at least two carbon atoms and at least one unsaturation, and which is attached to the

rest of the molecule by a single bond. Typical alkenyl radicals have from 2 to about 12, 2 to about 8 or 2 to about 6 carbon atoms. In a particular embodiment, the alkenyl group is vinyl, 1-methyl-ethenyl, 1-propenyl, 2-propenyl, or butenyl.

“Alkynyl” refers to a straight or branched hydrocarbon chain radical containing at least two carbon atoms and at least one carbon-carbon triple bond, and which is attached to the rest of the molecule by a single bond. Typical alkynyl radicals have from 2 to about 12, 2 to about 8 or 2 to about 6 carbon atoms. In a particular embodiment, the alkynyl group is ethynyl, propynyl (e.g. 1-propynyl, 2-propynyl), or butynyl (e.g. 1-butynyl, 2-butynyl, 3-butynyl).

"Cycloalkyl" refers to an alicyclic hydrocarbon which is saturated or partially saturated. Typical cycloalkyl radicals contain from 1 to 3 separated and/or fused rings and from 3 to about 18 carbon atoms, preferably from 3 to 10 carbon atoms, such as cyclopropyl, cyclohexyl or adamantyl. In a particular embodiment, the cycloalkyl radical contains from 3 to about 6 carbon atoms.

"Aryl" refers to single and multiple ring radicals, including multiple ring radicals that contain separate and/or fused aryl groups. Typical aryl groups contain from 1 to 3 separated or fused rings and from 6 to about 18 carbon ring atoms, such as phenyl, naphthyl (e.g. 2-naphthyl), indenyl, fenanthryl or anthracyl radical.

“Heterocyclyl” includes both aromatic and non-aromatic heterocyclic groups.

“Aromatic Heterocyclyl” or “Heteroaryl” refers to heteroaromatic groups containing from 1 to 3 separated and/or fused rings and from 3 to about 18 ring atoms. Preferably heteroaromatic groups contain from 5 to about 10 ring atoms. Suitable heteroaromatic groups in the compounds of the present invention contain one, two or three heteroatoms selected from N, O or S atoms and include, e.g., coumarinyl including 8-coumarinyl, quinolyl including 8-quinolyl, isoquinolyl, pyridyl, pyrazinyl, pyrazolyl, pyrimidinyl, furyl, pyrrolyl, thienyl, thiazolyl, isothiazolyl, triazolyl, tetrazolyl, isoxazolyl, oxazolyl, imidazolyl, indolyl, isoindolyl, indazolyl, indolizinyl, phthalazinyl, pteridinyl, purinyl, oxadiazolyl, thiadiazolyl, furazanyl, pyridazinyl, triazinyl, cinnolinyl, benzimidazolyl, benzofuranyl, benzofurazanyl, benzothienyl, benzothiazolyl, benzoxazolyl, quinazolinyl, quinoxalinyl, naphthyridinyl, and furopyridinyl.

“Non-aromatic Heterocyclyl” refers to heteroalicyclic groups containing from 1 to 3 separated and/or fused rings and from 3 to about 18 ring atoms. Preferably heteroalicyclic groups contain from 5 to about 10 ring atoms. Suitable heteroalicyclic groups in the compounds of the present invention contain one, two or three heteroatoms selected from N, O or S atoms and include, e.g., pyrrolidinyl, tetrahydrofuryl, dihydrofuryl, tetrahydrothienyl, tetrahydrothiopyranyl, piperidyl, morpholinyl, thiomorpholinyl, thioxanyl, piperazinyl, azetidinyl, oxetanyl, thietanyl, homopiperidinyl, oxepanyl, thiepanyl, azepinyl, oxazepinyl, diazepinyl, thiazepinyl, 1,2,3,6-tetrahydropyridyl, 2-pyrrolinyl, 3- pyrrolinyl, indolinyl, 2H-pyranyl, 4H-pyranyl, dioxanyl, 1,3-dioxolanyl, pyrazolinyl, dithianyl, dithiolanyl, dihydropyranyl, dihydrothienyl, pyrazolidinyl, imidazolinyl, imidazolidinyl, 3-azabicyclo[3.1.0]hexyl, 3-azabicyclo[4.1.0]heptyl, 3H-indolyl, and quinolizinyl.

"Alkoxy" refers to a radical of the formula -OR_a where R_a is an alkyl radical as defined above having one or more (e.g., 1, 2, 3 or 4) oxygen linkages and typically from 1 to about 12, 1 to about 8 or 1 to about 6 carbon atoms, e. g., methoxy, ethoxy, propoxy, etc.

"Aryloxy" refers to a radical of formula –O-aryl, where aryl is as previously defined. Some examples of aryloxy compounds are –O-phenyl (i.e. phenoxy), –O-p-tolyl, -O-m-tolyl, -O-o-tolyl or –O-naphthyl.

"Amino" refers to a radical of the formula -NH_2, -NHR_a or –NR_aR_b, optionally quaternized. In an embodiment of the invention each of R_a and R_b is independently selected from hydrogen and an alkyl radical as defined above. Therefore, examples of amino groups are, methylamino, ethylamino, dimethylamino, diethylamino, propylamino, etc...

"Halogen","halo" or "hal" refers to bromo, chloro, iodo or fluoro.

"Fused ring system" refers to a polycyclic ring system that contains fused rings. Typically, the fused ring system contains 2 or 3 rings and/or up to 18 ring atoms. As defined above, cycloalkyl radicals, aryl radicals and heterocyclyl radicals may form fused ring systems. Thus, fused ring system may be aromatic, partially aromatic or not aromatic and may contain heteroatoms. A spiro ring system is not a fused-polycyclic by this definition, but fused polycyclic ring systems of the invention may themselves have spiro rings attached thereto via a single ring atom of the system. Examples of fused ring systems are, but are not limited to, adamantyl, naphthyl (e.g. 2-naphthyl), indenyl, fenanthryl, anthracyl, pyrenyl, benzimidazole, benzothiazole, etc..

Unless otherwise stated specifically in the specification, all the groups may be optionally substituted, if applicable. References herein to substituted groups in the compounds of the present invention refer to the specified moiety that may be substituted at one or more (e.g., 1, 2, 3 or 4) available positions by one or more suitable groups, e. g., halogen such as fluoro, chloro, bromo and iodo ; cyano; hydroxyl; nitro; azido; acyl, such as alkanoyl, e.g. a C_{1-6} alkanoyl group, and the like; carboxamido; alkyl groups including those groups having 1 to about 12 carbon atoms or from 1 to about 6 carbon atoms and more preferably 1-3 carbon atoms; alkenyl and alkynyl groups including groups having one or more (e.g., 1, 2, 3 or 4) unsaturated linkages and from 2 to about 12 carbon or from 2 to about 6 carbon atoms; alkoxy groups having one or more (e.g., 1, 2, 3 or 4) oxygen linkages and from 1 to about 12 carbon atoms or 1 to about 6 carbon atoms; aryloxy such as phenoxy; alkylthio groups including those moieties having one or more (e.g., 1, 2, 3 or 4) thioether linkages and from 1 to about 12 carbon atoms or from 1 to about 6 carbon atoms; alkylsulfinyl groups including those moieties having one or more (e.g., 1, 2, 3 or 4) sulfinyl linkages and from 1 to about 12 carbon atoms or from 1 to about 6 carbon atoms ; alkylsulfonyl groups including those moieties having one or more (e.g., 1, 2, 3 or 4) sulfonyl linkages and from 1 to about 12 carbon atoms or from 1 to about 6 carbon atoms; aminoalkyl groups such as groups having one or more (e.g., 1, 2, 3 or 4) N atoms and from 1 to

about 12 carbon atoms or from 1 to about 6 carbon atoms; carbocylic aryl having 6 or more carbons, particularly phenyl or naphthyl and aralkyl such as benzyl.

The term “salt” must be understood as any form of a compound used in accordance with this invention in which said compound is in ionic form or is charged and coupled to a counter-ion (a cation or anion) or is in solution. This definition also includes quaternary ammonium salts and complexes of the molecule with other molecules and ions, particularly, complexes formed via ionic interactions. The definition includes in particular physiologically acceptable salts; this term must be understood as equivalent to “pharmacologically acceptable salts” or “pharmaceutically acceptable salts”.

The term “pharmaceutically acceptable salts” in the context of this invention means any salt that is tolerated physiologically (normally meaning that it is not toxic, particularly, as a result of the counter-ion) when used in an appropriate manner for a treatment, applied or used, particularly, in humans and/or mammals. These physiologically acceptable salts may be formed with cations or bases and, in the context of this invention, are understood to be salts formed by at least one compound used in accordance with the invention –normally an acid (deprotonated)– such as an anion and at least one physiologically tolerated cation, preferably inorganic, particularly when used on humans and/or mammals. Salts with alkali and alkali earth metals are preferred particularly, as well as those formed with ammonium cations (NH_4^+). Preferred salts are those formed with (mono) or (di)sodium, (mono) or (di)potassium, magnesium or calcium. These physiologically acceptable salts may also be formed with anions or acids and, in the context of this invention, are understood as being salts formed by at least one compound used in accordance with the invention – normally protonated, for example in nitrogen – such as a cation and at least one physiologically tolerated anion, particularly when used on humans and/or mammals. This definition specifically includes in the context of this invention a salt formed by a physiologically tolerated acid, i.e. salts of a specific active compound with physiologically tolerated organic or inorganic acids – particularly when used on humans and/or mammals. Examples of this type of salts are those formed with: hydrochloric acid, hydrobromic acid, sulphuric acid, methanesulfonic acid, formic acid, acetic acid, oxalic acid, succinic acid, malic acid, tartaric acid, mandelic acid, fumaric acid, lactic acid or citric acid.

The term “solvate” in accordance with this invention should be understood as meaning any form of a compound in accordance with the invention in which said compound is bonded by a non-covalent bond to another molecule (normally a polar solvent), including especially hydrates and alcoholates, like for example, methanolate. A preferred solvate is the hydrate.

Any compound that is a prodrug of a compound referred to herein is also within the scope of the invention. The term “prodrug” is used in its broadest sense and encompasses those derivatives that are converted in vivo to the compounds of the invention. Examples of prodrugs include, but are not limited to, derivatives of the compounds referred to herein such as compounds of formula (I) that include

biohydrolyzable moieties such as biohydrolyzable amides, biohydrolyzable esters, biohydrolyzable carbamates, biohydrolyzable carbonates, biohydrolyzable ureides, and biohydrolyzable phosphate analogues. Preferably, prodrugs of compounds with carboxyl functional groups are the lower alkyl esters of the carboxylic acid. The carboxylate esters are conveniently formed by esterifying any of the carboxylic acid moieties present on the molecule. Prodrugs can typically be prepared using well-known methods, such as those described in "Burger's Medicinal Chemistry, Drug Discovery and Development" 7th ed. (Donald J. Abraham ed., 2010, Wiley), "Design of Prodrugs" (H. Bundgaard ed., 1985, Elsevier), "A Textbook of Drug Design and Development" (P. Krogsgaard-Larsen and H. Bundgaard eds., 1991, Harwood Academic Publishers; Chapter 5: "Design and Applications of Prodrugs", p.113-191) and "Textbook of Drug Design and Discovery" 4th ed. (P. Krogsgaard-Larsen et al. ed., 2010, Taylor & Francis).

Any compound referred to herein is intended to represent such specific compound as well as certain variations or forms. In particular, compounds referred to herein may have asymmetric centres and therefore exist in different enantiomeric or diastereomeric forms. Thus, any given compound referred to herein is intended to represent any one of a racemate, one or more enantiomeric forms, one or more diastereomeric forms, and mixtures thereof. Likewise, stereoisomerism or geometric isomerism about the double bond is also possible, therefore in some cases the molecule could exist as (E)-isomer or (Z)-isomer (trans and cis isomers). If the molecule contains several double bonds, each double bond will have its own stereoisomerism, that could be the same as, or different to, the stereoisomerism of the other double bonds of the molecule. Furthermore, compounds referred to herein may exist as atropisomers. All the stereoisomers including enantiomers, diastereoisomers, geometric isomers and atropisomers of the compounds referred to herein, and mixtures thereof, are considered within the scope of the present invention.

Furthermore, any compound referred to herein may exist as tautomers. Specifically, the term tautomer refers to one of two or more structural isomers of a compound that exist in equilibrium and are readily converted from one isomeric form to another. Common tautomeric pairs are enamine-imine, amide-imidic acid, keto-enol, lactam-lactim, etc.

Unless otherwise stated, the compounds of the invention are also meant to include isotopically-labelled forms i.e. compounds which differ only in the presence of one or more isotopically-enriched atoms. For example, compounds having the present structures except for the replacement of at least one hydrogen atom by a deuterium or tritium, or the replacement of at least one carbon by ^{13}C- or ^{14}C-enriched carbon, or the replacement of at least one nitrogen by ^{15}N-enriched nitrogen are within the scope of this invention.

The compounds of the invention or their salts or solvates are preferably in pharmaceutically acceptable or substantially pure form. By pharmaceutically acceptable form is meant, inter alia, having a pharmaceutically acceptable level of

purity excluding normal pharmaceutical additives such as diluents and carriers, and including no material considered toxic at normal dosage levels. Purity levels for the drug substance are preferably above 50%, more preferably above 70%, most preferably above 90%. In a preferred embodiment it is above 95% of the compound of formula (I), or of its salts, solvates or prodrug.

As used herein, the terms “treat”, “treating” and “treatment” include the eradication, removal, reversion, alleviation, modification, or control of pain after its onset.

As used herein, the terms “prevention”, “preventing”, “preventive” “prevent” and “prophylaxis” refer to the capacity of a therapeutic to avoid, minimize or difficult the onset or development of a disease or condition before its onset, in this case pain.

Therefore, by "treating" or "treatment" and/or “preventing” or “prevention”, as a whole, is meant at least a suppression or an amelioration of the symptoms associated with the condition afflicting the subject, where suppression and amelioration are used in a broad sense to refer to at least a reduction in the magnitude of a parameter, e.g., symptom associated with the condition being treated, such as pain. As such, the method of the present invention also includes situations where the condition is completely inhibited, e.g., prevented from happening, or stopped, e.g., terminated, such that the subject no longer experiences the condition. As such, the present method includes both preventing and managing pain, particularly, peripheral neuropathic pain, central neuropathic pain, allodynia, causalgia, hyperalgesia, hyperesthesia, hyperpathia, neuralgia, neuritis or neuropathy.

As used herein, the term “potentiating the analgesic effect of a SNRI” refers to the increase in the effectiveness of the analgesic effect of said SNRI produced by sigma ligands. In an embodiment of the invention, said potentiating effect induces an increase in the analgesic effect of the SNRI by a factor of 1.2, 1.5, 2, 3, 4 or more when compared with the SNRI when administered in isolation. The measurement can be done following any known method in the art.

As used herein, the term “potentiating the analgesic effect of a Sigma ligand” refers to the increase in the effectiveness of the analgesic effect of said Sigma ligand produced by SNRI. In an embodiment of the invention said potentiating effect induces an increase in the analgesic effect of the Sigma ligand by a factor of 1.2, 1.5, 2, 3, 4 or more when compared with the Sigma ligand when administered in isolation. The measurement can be done following any known method in the art.

As above mentioned, the Sigma ligands of general formula (I) surprisingly potentiate the analgesic effect of SNRIs, thus reducing the doses needed to obtain effective analgesia of the latter. In preferred variants, the synergistic combination of the invention comprises at least one Serotonin–Norepinephrine Reuptake Inhibitor (SNRI) and at least one Sigma ligand of general formula (I), said SNRI being present in the combination in a subactive dose or in a non-effective amount (that is, in a dose or amount that is not active or effective to provide the desired effect when used alone).

"Synergy" may be defined as the interaction of multiple elements in a system to produce an effect different from or greater than the sum of their individual effects. Thus, the combinations of the present invention are synergistic.

In a preferred embodiment, R_1 in the compounds of general formula (I) is selected from H, -COR_8, and substituted or unsubstituted alkyl. More preferably, R_1 is selected from H, methyl and acetyl. A more preferred embodiment is when R_1 is H.

In another preferred embodiment, R_2 in the compounds of formula (I) represents H or substituted or unsubstituted alkyl, more preferably methyl.

In a particular embodiment of the invention, R_3 and R_4 in the compounds of formula (I) are situated in the meta and para positions of the phenyl group, and preferably, they are selected independently from halogen and substituted or unsubstituted alkyl.

In an especially preferred embodiment of the invention, in the compounds of formula (I) both R_3 and R_4 together with the phenyl group form an optionally substituted fused ring system. More preferably, said fused ring system is selected from a substituted or unsubstituted fused aryl group and a substituted or unsubstituted aromatic or partially aromatic fused heterocyclyl group. Said fused ring system preferably contains two rings and/or from 9 to about 18 ring atoms, more preferably 9 or 10 ring atoms. Even more preferably, the fused ring system is naphthyl, especially a 2-naphthyl ring system, substituted or unsubstituted.

Also in the compounds of formula (I), embodiments where n is selected from 2, 3 or 4 are preferred in the context of the present invention, more preferably n is 2.

In another embodiment it is preferred in the compounds of formula (I) that R_5 and R_6 are, each independently, C_{1-6}alkyl, or together with the nitrogen atom to which they are attached form a substituted or unsubstituted heterocyclyl group, in particular a group chosen among morpholinyl, piperidinyl, and pyrrolidinyl group. More preferably, R_5 and R_6 together form a morpholine-4-yl group.

In additional preferred embodiments, the preferences described above for the different substituents are combined. The present invention is also directed to such combinations of preferred substitutions in the formula (I) above.

In preferred variants of the invention, the Sigma ligand of general formula (I) is selected from:

[1] 4-{2-(1-(3,4-dichlorophenyl)-5-methyl-1H pyrazol-3-yloxy)ethyl} morpholine,

[2] 2-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]-N,N-diethylethanamine,

[47] 1-(3,4-Dichlorophenyl)-4,5-dimethyl-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazole,

[48] 1-(3,4-Dichlorophenyl)-4,5-dimethyl-3-[3-(pyrrolidin-1-yl)propoxy]-1H-pyrazole,

[49] 1-{2-[1-(3,4-Dichlorophenyl)-4,5-dimethyl-1H-pyrazol-3-yloxy]ethyl} piperidine,

[50] 4-{4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]butyl}morpholine,

[51](2S,6R)-4-{4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]butyl}-2,6-dimethylmorpholine,

[52] 1-{4-[1-(3,4-Dichlorophenyl)-1H-pyrazol-3-yloxy]butyl}piperidine,

[53] 1-(3,4-Dichlorophenyl)-3-[4-(pyrrolidin-1-yl)butoxy]-1H-pyrazole,

[55] 4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]-N,N-diethylbutan-1-amine,

[56] N-benzyl-4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]-N-methylbutan-1-amine,

[57]4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]-N-(2-methoxyethyl)-N-methylbutan-1-amine,

[58] 4-{4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]butyl}thiomorpholine,

[59]1-[1-(3,4-Dichlorophenyl)-5-methyl-3-(2-morpholinoethoxy)-1H-pyrazol-4-yl]ethanone,

[60]1-{1-(3,4-dichlorophenyl)-5-methyl-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazol-4-yl}ethanone,

[61] 1-{1-(3,4-dichlorophenyl)-5-methyl-3-[2-(piperidin-1-yl)ethoxy]-1H-pyrazol-4-yl}ethanone,

[62] 1-{1-(3,4-dichlorophenyl)-3-[2-(diethylamino)ethoxy]-5-methyl-1H-pyrazol-4-yl}ethanone,

[63] 4-{2-[5-Methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine,

[64] N,N-Diethyl-2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy] ethanamine,

[65] 1-{2-[5-Methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}piperidine, and

[66] 5-Methyl-1-(naphthalen-2-yl)-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazole,

or a pharmaceutically acceptable salt, isomer, solvate or prodrug thereof.

In a preferred variant of the invention, the Sigma ligand of general formula (I) is 4-{2-[5-Methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl} morpholine or a salt thereof.

Preferably, the compound of general formula (I) used is 4-{2-[5-Methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine hydrochloride.

These particular compounds are designated in the examples of the present invention as compound 63 and compound 63·HCl.

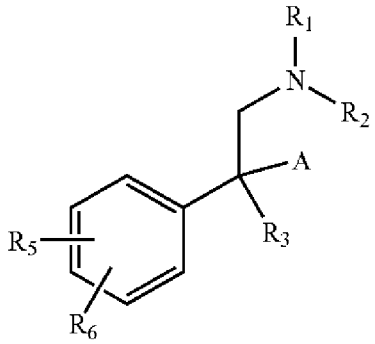

The compounds of general formula (I) and their salts or solvates can be prepared as disclosed in the previous application WO2006/021462.

By "SNRI" is meant any member of the class of compounds that act upon, and increase, the levels of two neurotransmitters in the brain known to play an important part in mood: serotonin, and norepinephrine.

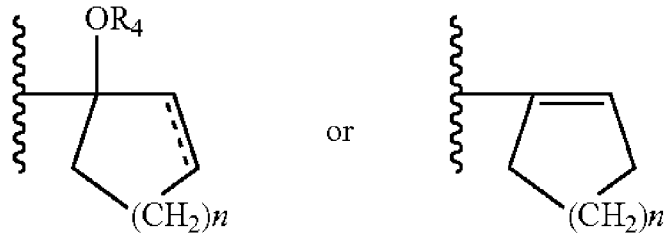

Examples of Serotonin–Norepinephrine Reuptake Inhibitors (SNRIs) in the present invention include, but are not limited to, venlafaxine, desvenlafaxine, duloxetine, milnacipram, levomilnacipram, sibutramine, nefazodone and bicifadine or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof. Particular salts are the following: venlafaxine hydrochloride, desvenlafaxine succinate monohydrate, duloxetine hydrochloride, sibutramine hydrochloride monohydrate, sibutramine mesylate hemihydrate and nefazodone hydrochloride.

Structural analogs of the above-mentioned SNRIs are also contemplated by the present invention. US 2007/0208134 discloses several examples of these analogs, which can be synthesized by conventional procedures such as the methods described in the references cited therein.

Structural analogs of venlafaxine are those compounds having the formula:

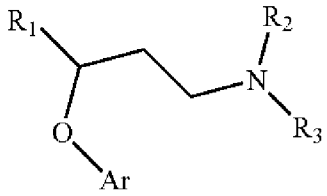

as well as pharmaceutically acceptable salts thereof, wherein A is a moiety of the formula:

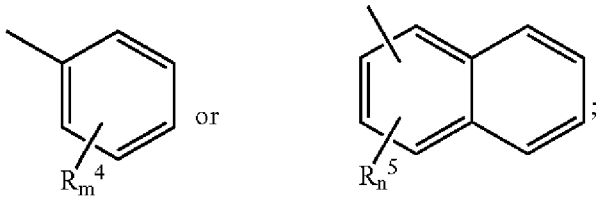

where the dotted line represents optional unsaturation; R_1 is hydrogen or alkyl; R_2 is C_{1-4} alkyl; R_4 is hydrogen, C_{1-4} alkyl, formyl or alkanoyl; R_3 is hydrogen or C_{1-4} alkyl; R_5 and R_6 are, independently, hydrogen, hydroxyl, C_{1-4} alkyl, C_{1-4} alkoxy, C_{1-4} alkanoyloxy, cyano, nitro, alkylmercapto, amino, C_{1-4} alkylamino, dialkylamino, C_{1-4} alkanamido, halo, trifluoromethyl or, taken together, methylenedioxy; and n is 0, 1, 2, 3 or 4.

Structural analogs of duloxetine are those having the formula:

as well as pharmaceutically acceptable salts thereof, wherein R_1 is C_5-C_7 cycloalkyl, thienyl, halothienyl, (C_1-C_4alkyl)thienyl, furanyl, pyridyl, or thiazolyl; each of R_2 and R_3 Ar is, independently, hydrogen or methyl; Ar is

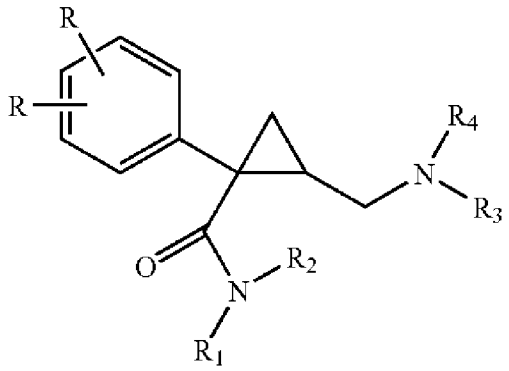

each R_4 is, independently, halo, C_1-C_4 alkyl, C_1-C_3 alkoxy, or trifluoromethyl; each R_5 is, independently, halo, C_1-C_4 alkyl, or trifluoromethyl; m is 0, 1, or 2; and n is 0 or 1.

Exemplary duloxetine structural analogs are N-methyl-3-(1-naphthalenyloxy)-3-(3-thienyl)propanamine phosphate; N-methyl-3-(2-naphthalenyloxy)-3-(cyclohexyl)propanamine citrate; N,N-dimethyl-3-(4-chloro-1-naphthalenyloxy)-3-(3-furanyl)propanamine hydrochloride; N-methyl-3-(5-methyl-2-naphthalenyloxy)-3-(2-thiazolyl)propanamine hydrobromide; N-methyl-3-[3-(trifluoromethyl)-1-naphthalenyloxy]-3-(3-methyl-2-thienyl)propanamine oxalate; N-methyl-3-(6-iodo-1-naphthalenyloxy)-3-(4pyridyl)propanamine maleate; N,N-dimethyl-3-(1-naphthalenyloxy)-3-(cycloheptyl)propanamine formate; N,N-dimethyl-3-(2-naphthalenyloxy)-3-(2-pyridyl)propanamine; N-methyl-3-(1-naphthalenyloxy)-3-(2-furanyl)propanamine sulfate; N-methyl-3-(4-methyl-1-naphthalenyloxy)-3-(4-thiazolyl)propanamine oxalate; N-methyl-3-(2-naphthalenyloxy)-3-(2-thienyl)propanamine hydrochloride; N,N-dimethyl-3-(6-iodo-2-naphthalenyloxy)-3-(4-bromo-3-thienyl)propanamine malonate; N,N-dimethyl-3-(1-naphthalenyloxy)-3-(3-pyridyl)propanamine hydroiodide; N,N-dimethyl-3-(4-methyl-2-naphthalenyloxy)-3-(3-furanyl)propanamine maleate; N-methyl-3-(2-naphthalenyloxy)-3-(cyclohexyl)propanamine caprate; N-methyl-3-(6-n-propyl-1-naphthalenyloxy)-3-(3-isopropyl-2-thienyl)propanamine citrate; N,N-dimethyl-3-(2-methyl-1-naphthalenyloxy)-3-(4-thiazolyl)propanamine monohydrogen phosphate; 3-(1-naphthalenyloxy)-3-(5-ethyl-3-thienyl)propanamine succinate; 3-[3-(trifluoromethyl)-1-naphthalenyloxy]-3-(pyridyl)propanamine acetate; N-methyl-3-(6-methyl-1-naphthalenyl-3-(4-chloro-2-thienyl)propanamine tartrate; 3-(2-naphthalenyloxy)-3-(cyclopentyl)propanamine; N-methyl-3-(4-n-butyl-1-naphthalenyloxy)-3-(3-furanyl)propanamine methanesulfonate; 3-(2-chloro-1-naphthalenyloxy)-3-(5-thiazolyl)propanamine oxalate; N-methyl-3-(1-naphthalenyloxy)-3-(3-furanyl)propanamine tartrate; N,N-dimethyl-3-(phenoxy)-3-(2-furanyl)propanamine oxalate; N,N-dimethyl-3-[4-(trifluoromethyl)phenoxy]-3-(cyclohexyl)propanamine hydrochloride; N-methyl-3-(4-methylphenoxy)-3-(4-chloro-2-thienyl)propanamine propionate; N-methyl-3-(phenoxy)-3-(3-pyridyl)propanamine oxalate; 3-2-chloro-4-(trifluoromethyl)phenoxy]-3-(2-thienyl)propanamine; N,N-dimethyl-3-(3-methoxyphenoxy)-3-(3-bromo-2-thienyl)propanamine citrate; N-methyl-3-(4-bromophenoxy)-3-(4-thiazolyl)propanamine maleate; N,N-dimethyl-3-(2-ethylphenoxy)-3-(5-methyl-3-thienyl)propanamine; N-methyl-3-(2-bromophenoxy)-3-(3-thienyl)propanamine succinate; N-methyl-3-(2,6-dimethylphenoxy)-3-(3-methyl-2-thienyl)propanamine acetate; 3-[3-(trifluoromethyl)phenoxy]-3-(3-furanyl)propanamine oxalate; N-methyl-3-(2,5-dichlorophenoxy)-3-(cyclopentyl)propanamine; 3-[4-(trifluoromethyl)phenoxy]-3-(2-thiazolyl)propanamine; N-methyl-3-(phenoxy)-3-(5-methyl-2-thienyl)propanamine citrate; 3-(4-methylphenoxy)-3-(4-pyridyl)propanamine hydrochloride; N,N-dimethyl-3-(3-methyl-5-bromophenoxy)-3-(3-thienyl)propanamine; N-methyl-3-(3-n-propylphenoxy)-3-(2-thienyl)propanamine hydrochloride; N-methyl-3-(phenoxy)-3-(3-thienyl)propanamine phosphate; N-methyl-3-(4-methoxyphenoxy)-3-(cycloheptyl)propanamine citrate; 3-(2-chlorophenoxy)-3-(5-thiazolyl)propanamine

propionate; 3-2-chloro-4-(trifluoromethyl)phenoxy]-3-(3-thienyl)propanamine oxalate; 3-(phenoxy)-3-(4-methyl-2-thienyl)propanamine; N,N-dimethyl-3-(4-ethylphenoxy)-3-(3-pyridyl)propanamine maleate; and N,N-dimethyl-3-[4-(trifluoromethyl)phenoxy]-3-(2-pyridyl)propanamine.

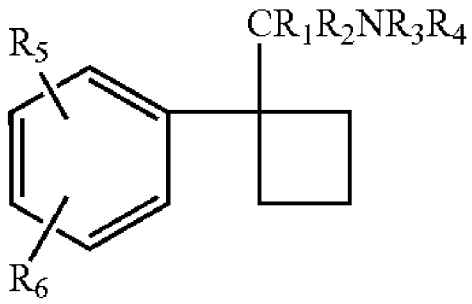

Structural analogs of milnacipram are those having the formula:

as well as pharmaceutically acceptable salts thereof, wherein each R, independently, represents hydrogen, bromo, chloro, fluoro, C_{1-4} alkyl, C_{1-4} alkoxy, hydroxy, nitro or amino; each of R_1 and R_2, independently, represents hydrogen, C_{1-4} alkyl, C_{6-12} aryl or C_{7-14} alkylaryl, optionally substituted, preferably in para position, by bromo, chloro, or fluoro, or R_1 and R_2 together form a heterocycle having 5 or 6 members with the adjacent nitrogen atoms; R_3 and R_4 represent hydrogen or a C_{1-4} alkyl group or R_3 and R_4 form with the adjacent nitrogen atom a heterocycle having 5 or 6 members, optionally containing an additional heteroatom selected from nitrogen, sulphur, and oxygen.

Exemplary milnacipram structural analogs are 1-phenyl 1-aminocarbonyl 2-dimethylaminomethyl cyclopropane; 1-phenyl 1-dimethylaminocarbonyl 2-dimethylaminomethyl cyclopropane; 1-phenyl 1-ethylaminocarbonyl 2-dimethylaminomethyl cyclopropane; 1-phenyl 1-diethylaminocarbonyl 2-aminomethyl cyclopropane; 1-phenyl 2-dimethylaminomethyl N-(4′-chlorophenyl)cyclopropane carboxamide; 1-phenyl 2-dimethylaminomethyl N-(4′-chlorobenzyl)cyclopropane carboxamide; 1-phenyl 2-dimethylaminomethyl N-(2-phenylethyl)cyclopropane carboxamide; (3,4-dichloro-1-phenyl)2-dimethylaminomethyl N,N-dimethylcyclopropane carboxamide; 1-phenyl 1-pyrrolidinocarbonyl 2-morpholinomethyl cyclopropane; 1-p-chlorophenyl 1-aminocarbonyl 2-aminomethyl cyclopropane; 1-orthochlorophenyl 1-aminocarbonyl 2-dimethylaminomethyl cyclopropane; 1-p-hydroxyphenyl 1-aminocarbonyl 2-dimethylaminomethyl cyclopropane; 1-p-nitrophenyl 1-dimethylaminocarbonyl 2-dimethylaminomethyl cyclopropane; 1-p-aminophenyl 1-dimethylaminocarbonyl 2-dimethylaminomethyl cyclopropane; 1-p-tolyl 1-methylaminocarbonyl 2-dimethylaminomethyl cyclopropane; 1-p-methoxyphenyl 1-aminomethylcarbonyl 2-aminomethyl cyclopropane; and pharmaceutically acceptable salts of any thereof.

Structural analogs of sibutramine are those compounds having the formula:

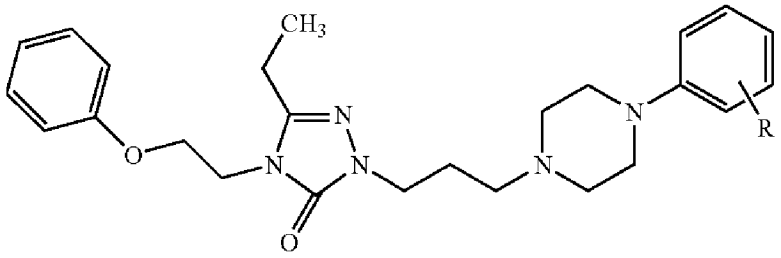

as well as pharmaceutically acceptable salts thereof, wherein R_1 is C_{1-6} alkyl, C_{2-6} alkenyl, C_{2-6} alkynyl, C_{3-7} cycloalkyl, cycloalkylalkyl, or optionally substituted phenyl (substitutents include halogen and C_{1-3} alkyl); R_2 is H or C_{1-3} alkyl; each of R_3 and R_4 is, independently, H, formyl, or R_3 and R_4 together with the nitrogen atom form a heterocyclic ring system; each of R_5 and R_6 is, independently, H, halogen, CF_3, C_{1-3} alkyl, C_{1-3} alkoxy, C_{1-3} alkylthio, or R_6 together with the carbon atoms to which they are attached form a second benzen ring.

Exemplary sibutramine structural analogs are i-[1-(3,4-dichlorophenyl)cyclobutyl]ethylamine hydrochloride; N-methyl-1-[1-(3,4-dichlorophenyl)cyclobutyl]ethylamine hydrochloride; N,N-dimethyl-1-[1-(3,4-dichlorophenyl)cyclobutyl]ethylamine hydrochloride; 1-[1-(4-iodophenyl)cyclobutyl]ethylamine hydrochloride; N-methyl-1-[1-(4-iodophenyl)cyclobutyl]ethylamine hydrochloride; N,N-dimethyl-1-[1-(4-iodophenyl)cyclobutyl]ethylamine hydrochloride; N-methyl-1-[1-(2-naphthyl)cyclobutyl]ethylamine hydrochloride; N,N-dimethyl-1-[1-(4-chloro-3-trifluoromethylphenyl)cyclobutyl]ethylamine hydrochloride; i-[1-(4-chlorophenyl)cyclobutyl]butylamine hydrochloride; N-methyl-1-[1-(4-chlorophenyl)cyclobutyl]butylamine hydrochloride; N,N-dimethyl-1-[1-(4-chlorophenyl)cyclobutyl]butyl amine hydrochloride; 1-[1-(3,4-dichlorophenyl)cyclobutyl]butylamine hydrochloride; N-methyl-1-[1-(3,4-dichlorophenyl)cyclobutyl]butylamine hydrochloride; N,N-dimethyl-1-[1-(3,4-dichlorophenyl)cyclobutyl]butylamine hydrochloride; 1-[1-(4-biphenylyl)cyclobutyl]butylamine hydrochloride; N,N-dimethyl-1-[1-(4-biphenylyl)cyclobutyl]butylamine hydrochloride; 1-[1-(4-chloro-3-fluorophenyl)cyclobutyl]butylamine hydrochloride; N-formyl-1-[1-(4-chloro-3-fluorophenyl)cyclobutyl]butylamine; 1-[1-(3-chloro-4-methylphenyl)cyclobutyl]butylamine hydrochloride; N-formyl-1-[1-phenylcyclobutyl]butylamine; 1-[1-(3-trifluoromethylphenyl)cyclobutyl]butylamine hydrochloride; 1-[1-(naphth-2-yl)cyclobutyl]butylamine hydrochloride; 1-[1-(6-chloronaphth-2-yl)cyclobutyl]butylamine; N-methyl-1-[1-(4-chlorophenyl)cyclobutyl]-2-methylpropylamine hydrochloride; 1-[1-(4-chlorophenyl)cyclobutyl]pentylamine hydrochloride; N-methyl-1-[1-(4-chlorophenyl)cyclobutyl]pentylamine hydrochloride; N,N-dimethyl-1-[1-phenylcyclobutyl]-3-methylbutylamine hydrochloride; 1-[1-(4-chlorophenyl)cyclobutyl]-3-methylbutylamine hydrochloride; N-methyl-1-[1-(4-chlorophenyl)cyclobutyl]-3-methylbutylamine hydrochloride; N,N-dimethyl-1-[1-(4-

chlorophenyl)cyclobutyl]-3-methylbutylamine hydrochloride; N-formyl-1-[1-(4-chlorophenyl)cyclobutyl]-3-methylbutylamine; N,N-dimethyl-1-[1-(3,4-dichlorophenyl)cyclobutyl]-3-methylbutylamine hydrochloride; N-methyl-1-[1-(naphth-2-yl)cyclobutyl]-3-methylbutylamine hydrochloride; N-methyl-1-[1-(3,4-dimethylphenyl)cyclobutyl]-3-methylbutylamine hydrochloride; [1-(4-chlorophenyl)cyclobutyl](cyclopropyl)methylamine hydrochloride; N-methyl-[1-(4-chlorophenyl)cyclobutyl](cyclopentyl)methylamine hydrochloride; [1-(4-chlorophenyl)cyclobutyl](cyclohexyl)methylamine hydrochloride; N-methyl-[1-(4-chlorophenyl)cyclobutyl](cyclohexyl)methylamine hydrochloride; [1-(3,4-dichlorophenyl)cyclobutyl](cyclohexyl)methylamine hydrochloride; N-methyl-[1-(3,4-dichlorophenyl)cyclobutyl](cyclohexyl)methylamine hydrochloride; [1-(4-chlorophenyl)cyclobutyl](cycloheptyl)methylamine hydrochloride; 1-[1-(4-chlorophenyl)cyclobutyl]-2-cyclopropylethylamine hydrochloride; N,N-dimethyl-1-[1-(4-chlorophenyl)cyclobutyl]-2-cyclohexylethylamine hydrochloride; α-[1-(4-chlorophenyl)cyclobutyl]benzylamine hydrochloride; N-methyl-α-[1-(4-chlorophenyl)cyclobutyl]benzylamine hydrochloride; 1-[1-(4-chloro-2-fluorophenyl)cyclobutyl]butylamine; N,N-dimethyl-1-[1-(4-chloro-2-fluorophenyl)cyclobutyl]butylamine hydrochloride; N-ethyl-1-[1-(3,4-dichlorophenyl)cyclobutyl]ethylamine hydrochloride; and N,N-diethyl-1-[1-(3,4-dichlorophenyl)cyclobutyl]ethylamine hydrochloride.

Structural analogs of nefazodone are those compounds having the formula:

as well as pharmaceutically acceptable salts thereof, wherein R is halogen.

A particular embodiment refers to the combination of the invention comprising 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof and a SNRI selected from the group consisting of venlafaxine, desvenlafaxine, duloxetine, milnacipram, levomilnacipram, sibutramine, nefazodone and bicifadine, or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof.

A more particular embodiment refers to the combination of the invention comprising 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine hydrochloride and a SNRI selected from the group consisting of venlafaxine, desvenlafaxine, duloxetine, milnacipram, levomilnacipram, sibutramine, nefazodone and bicifadine or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof.

A preferred embodiment refers to the synergistic combination of the invention comprising 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof and venlafaxine or a pharmaceutically acceptable salt thereof such as venlafaxine hydrochloride.

A more preferred embodiment refers to the synergistic combination of the invention comprising 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine hydrochloride and venlafaxine or a pharmaceutically acceptable salt thereof such as venlafaxine hydrochloride.

Another preferred embodiment refers to the synergistic combination of the invention comprising 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof and duloxetine or a pharmaceutically acceptable salt thereof such as duloxetine hydrochloride.

Another more preferred embodiment refers to the synergistic combination of the invention comprising 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine hydrochloride and duloxetine or a pharmaceutically acceptable salt thereof such as duloxetine hydrochloride.

The present invention refers also to medicaments or pharmaceutical compositions comprising at least one Sigma ligand of general formula (I) as defined above, or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof, and at least one SNRI combined jointly or separately, together with at least a pharmaceutically acceptable excipient.

The term “excipient” refers to components of a drug compound other than the active ingredient (definition obtained from the European Medicines Agency- EMA). They preferably include a "carrier, adjuvant and/or vehicle". Carriers are forms to which substances are incorporated to improve the delivery and the effectiveness of drugs. Drug carriers are used in drug-delivery systems such as the controlled-release technology to prolong in vivo drug actions, decrease drug metabolism, and reduce drug toxicity. Carriers are also used in designs to increase the effectiveness of drug delivery to the target sites of pharmacological actions (U.S. National Library of Medicine. National Institutes of Health). Adjuvant is a substance added to a drug product formulation that affects the action of the active ingredient in a predictable way. Vehicle is an excipient or a substance, preferably without therapeutic action, used as a medium to give bulk for the administration of medicines (Stedman's Medical Spellchecker, © 2006 Lippincott Williams & Wilkins). Such pharmaceutical carriers, adjuvants or vehicles can be sterile liquids, such as water and oils, including those of petroleum, animal, vegetable or synthetic origin, such as peanut oil, soybean oil, mineral oil, sesame oil and the like, excipients, disgregants, wetting agents or diluents. Suitable pharmaceutical carriers are described in "Remington's Pharmaceutical Sciences" by E.W. Martin. The selection of these excipients and the amounts to be used will depend on the form of application of the pharmaceutical composition.

The pharmaceutical composition according to the present invention can be adapted to any form of administration, be it orally or parenterally, for example pulmonarily, nasally, rectally and/or intravenously. Therefore, the formulation according to the present invention may be adapted for topical or systemic application, particularly for dermal, subcutaneous, intramuscular, intra-articular, intraperitoneal, pulmonary, buccal, sublingual, nasal, percutaneous, vaginal, oral or parenteral application. The preferred form of rectal application is by means of suppositories.

Suitable preparations for oral applications are tablets, pills, chewing gums, capsules, granules, drops or syrups. Suitable preparations for parenteral applications are solutions, suspensions, reconstitutable dry preparations or sprays.

The combination of the invention may be formulated as deposits in dissolved form or in patches, for percutaneous application. Skin applications include ointments, gels, creams, lotions, suspensions or emulsions.

The combination of the invention may be formulated for its simultaneous, separate or sequential administration, with at least a pharmaceutically acceptable excipient. This has the implication that the combination of the Sigma ligand of general formula (I) and the SNRI may be administered:

a) As a combination that is being part of the same medicament formulation, both being then administered always simultaneously.

b) As a combination of two units, each with one of them giving rise to the possibility of simultaneous, sequential or separate administration. In a particular embodiment, the Sigma ligand of general formula (I) is independently administered from the SNRI (i.e in two units) but at the same time. In another particular embodiment, the sigma ligand of general formula (I) is administered first, and then the SNRI is separately or sequentially administered. In yet another particular embodiment, the SNRI is administered first, and then the Sigma ligand of general formula (I) is administered, separately or sequentially, as defined.

In a particular embodiment of the present invention, the pain is selected from central and peripheral neuropathic pain, allodynia, causalgia, hyperalgesia, hyperesthesia, hyperpathia, neuralgia, neuritis or neuropathy. More preferably, the pain is peripheral neuropathic pain, hyperalgesia or allodynia.

"Neuropathic pain" is defined by the IASP as "pain initiated or caused by a primary lesion or dysfunction in the nervous system" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 210). For the purpose of this invention this term is to be treated as synonymous to "Neurogenic Pain" which is defined by the IASP as "pain initiated or caused by a primary lesion, dysfunction or transitory perturbation in the peripheral or central nervous system".

According to the IASP "peripheral neuropathic pain" is defined as "a pain initiated or caused by a primary lesion or dysfunction in the peripheral nervous system" and "peripheral neurogenic pain" is defined as "a pain initiated or caused by a primary

lesion, dysfunction or transitory perturbation in the peripheral nervous system" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 213).

According to the IASP "allodynia" is defined as "a pain due to a stimulus which does not normally provoke pain" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 210).

According to the IASP "causalgia" is defined as "a syndrome of sustained burning pain, allodynia and hyperpathia after a traumatic nerve lesion, often combined with vasomotor and sudomotor dysfunction and later trophic changes" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 210).

According to the IASP "hyperalgesia" is defined as "an increased response to a stimulus which is normally painful" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 211).

According to the IASP "hyperesthesia" is defined as "increased sensitivity to stimulation, excluding the senses" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 211).

According to the IASP "hyperpathia" is defined as "a painful syndrome characterized by an abnormally painful reaction to a stimulus, especially a repetitive stimulus, as well as an increased threshold" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 212).

The IASP draws the following difference between "allodynia", "hyperalgesia" and "hyperpathia" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 212):

Allodynia	Lowered threshold	Stimulus and response mode differ
Hyperalgesia	Increased response	Stimulus and response rate are the same
Hyperpathia	Raised threshold Increased response	Stimulus and response rate may be the same or different

According to the IASP "neuralgia" is defined as "pain in the distribution of a nerve or nerves" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 212).

According to the IASP "neuritis" is defined as "inflammation of a nerve or nerves" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 212).

According to the IASP "neuropathy/neuritis" is defined as "a disturbance of function or pathological change in a nerve: in one nerve mononeuropathy, in several nerves mononeuropthy multiplex, if diffuse and bilateral, polyneuropathy" (IASP, Classification of chronic pain, 2nd Edition, IASP Press (1994), 212).

Another aspect of the invention is a method of treatment and/or prophylaxis of a patient suffering from pain, or likely to suffer pain, the method comprising administering

to the patient in need of such a treatment or prophylaxis a therapeutically effective amount of a combination comprising at least one Sigma ligand of general formula (I) as defined above, or a pharmaceutically acceptable salt, isomer, prodrug or solvate thereof, and at least one SNRI.

By an "effective" amount or a "therapeutically effective amount" of a drug or pharmacologically active agent is meant a nontoxic but sufficient amount of the drug or agent to provide the desired effect. In the combination therapy of the present invention, an "effective amount" of one component of the combination (i.e. Sigma ligand of general formula (I) or SNRI) is the amount of that compound that is effective to provide the desired effect when used in combination with the other component of the combination (i.e. SNRI or Sigma ligand of general formula (I)). The amount that is "effective" will vary from subject to subject, depending on the age and general condition of the individual, the particular active agent or agents, and the like. Thus, it is not always possible to specify an exact “effective amount". However, an appropriate "effective" amount in any individual case may be determined by one of ordinary skill in the art using routine experimentation.

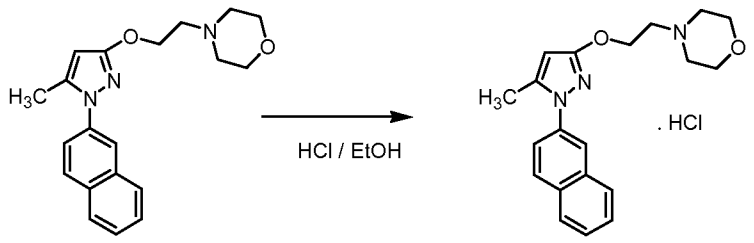

According to the present invention the dosage of the SNRI can be reduced when combined with a Sigma ligand of general formula (I), and therefore attaining the same analgesic effect with a reduced dosage, and thus attenuating the adverse effects.

For example, the dosage regime that must be administered to the patient will depend on the patient’s weight, the type of application, the condition and severity of the disease. A preferred dosage regime comprises an administration of a Sigma compound of general formula (I) within a range of 0.5 to 100 mg/kg and of the SNRI from 0.15 to 15 mg/kg. The administration may be performed once or in several occasions.

Having described the present invention in general terms, it will be more easily understood by reference to the following examples which are presented as an illustration and are not intended to limit the present invention.

EXAMPLES

Example 1. Synthesis of 4-{2-[5-Methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl} morpholine (compound 63) and its hydrochloride salt

Compound 63 **Compound 63·HCl**

Compound 63 can be prepared as disclosed in the previous application WO2006/021462. Its hydrochloride can be obtained according the following procedure:

Compound 63 (6.39 g) was dissolved in ethanol saturated with HCl, the mixture was stirred then for some minutes and evaporated to dryness. The residue was crystallized from isopropanol. The mother liquors from the first crystallization afforded a second crystallization by concentrating. Both crystallizations taken together yielded 5.24 g (63 %) of the corresponding hydrochloride salt (m.p. = 197-199°C.)

^{1}H-NMR (DMSO-d_6) δ ppm: 10,85 (bs, 1H), 7,95 (m, 4H), 7,7 (dd, J=2,2, 8,8 Hz, 1H), 7,55 (m, 2H), 5,9 (s, 1H), 4,55 (m, 2H), 3,95 (m, 2H), 3,75 (m, 2H), 3,55-3,4 (m, 4H), 3,2 (m, 2H), 2,35 (s, 3H).

HPLC purity: 99.8%

Example 2: **Assessment of analgesia in the treatment post-operative pain**

2.1 General protocol.

The induction of anesthesia in rats was performed with 3% isofluran for veterinary use, employing an Ohmeda vaporizer and an anesthesia chamber. Anesthesia was kept during the surgical operation by a tube which directs the isofluran vapors to the animal's snout. Once the rats were anesthetized, they were laid down in a prone position and their right hind paws were cleaned out with alcohol.

Then, a skin incision in the hindpaw of about 10 mm was made by means of a scalpel, starting about 5 mm from the heel and extending toward the toes. Fascia was located and by means of curve scissors muscle was elevated and a longitudinal incision of about 5 mm was made, thus the muscle origin and insertion remained intact. The skin of the paw was stitched with a suturing stitch with breaded silk (3.0) and the wound was cleaned out with povidone.

The assessment was performed 30 minutes after the administration of product and always 4 hours after the plantar incision. The analysis was carried out evaluating the mechanical allodynia. It was tested using von Frey filaments: Animals were placed in methacrylate cylinders on an elevated surface, with metallic mesh floor perforated in order to apply the filaments. After an acclimation period of about 30 minutes within the cylinders, both hindpaws were stimulated (the injured and the non-injured paw, serving the latter as control), starting with the lowest force filament (0.4 g) and reaching a 15 g filament. The animal's response to pain was manifested by the withdrawal of the paw as a consequence of the painful stimulus caused by a filament.

2.2 <u>Combination of compound 63·HCl and Venlafaxine</u>

The efficacy of the combined use of venlafaxine and compound 63·HCl was tested at different doses of compound 63·HCl (5, 10, 20, 40 and 80 mg/kg), while the venlafaxine dose remained constant (2.5 mg/kg). The administrations were performed 3.5 hours after surgery. The treated subjects were tested according to the mechanical allodynia protocol above (Figure 1).

2.3 Combination of compound 63·HCl and Duloxetine

The efficacy of the combined use of duloxetine and compound 63·HCl was tested at different doses of compound 63·HCl (10, 20, 40 and 80 mg/kg), while the duloxetine dose remained constant (0.625 mg/kg). The administrations were performed 3.5 hours after surgery. The treated subjects were tested according to the mechanical allodynia protocol above (Figure 2).

Conclusions:

As shown in Figure 1, compound 63·HCl produced a dose dependent effect with a maximum effect of 43%. The Figure also shows Venlafaxine, in a sub-active dose (2.5 mg/kg), which produced a non-significant effect. Finally, it can be seen that the combination Venlafaxine (in a sub-active dose) and compound 63·HCl produced a dose-dependent effect with ED50=14.5 mg/kg. Therefore, compound 63·HCl and Venlafaxine act synergically to produce analgesia in the treatment of post-operative pain.

As shown in Figure 2, compound 63·HCl produced a dose dependent effect with an ED50 of 40 mg/kg. The Figure also shows Duloxetine, in a sub-active dose (0.625 mg/kg), which produced a non-significant effect. Finally, it can be seen that the combination Duloxetine (in a sub-active dose) and compound 63·HCl produced a dose-dependent effect with ED50=28 mg/kg. Therefore, compound 63·HCl and Duloxetine act synergically to produce analgesia in the treatment of post-operative pain.

CLAIMS

1. A synergistic combination comprising at least one Serotonin–Norepinephrine Reuptake Inhibitor (SNRI) and at least one Sigma ligand of general formula (I)

(I)

wherein,

R_1 is selected from the group consisting of hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl, substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted arylalkyl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted heterocyclylalkyl, $-COR_8$, $-C(O)OR_8$, $-C(O)NR_8R_9$, $-CH=NR_8$, -CN, $-OR_8$, $-OC(O)R_8$, $-S(O)_t-R_8$, $-NR_8R_9$, $-NR_8C(O)R_9$, $-NO_2$, $-N=CR_8R_9$, and halogen;

R_2 is selected from the group consisting of hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl, substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted arylalkyl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted heterocyclylalkyl, $-COR_8$, $-C(O)OR_8$, $-C(O)NR_8R_9$, $-CH=NR_8$, -CN, $-OR_8$, $-OC(O)R_8$, $-S(O)_t-R_8$, $-NR_8R_9$, $-NR_8C(O)R_9$, $-NO_2$, $-N=CR_8R_9$, and halogen;

R_3 and **R_4** are independently selected from the group consisting of hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl, substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted arylalkyl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted heterocyclylalkyl, $-COR_8$, $-C(O)OR_8$, $-C(O)NR_8R_9$, $-CH=NR_8$, -CN, $-OR_8$, $-OC(O)R_8$, $-S(O)_t-R_8$, $-NR_8R_9$, $-NR_8C(O)R_9$, $-NO_2$, $-N=CR_8R_9$, and halogen, or together with the phenyl they form an optionally substituted fused ring system;

R_5 and **R_6** are independently selected from the group consisting of hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl,

substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted arylalkyl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted heterocyclylalkyl, -COR_8, -$C(O)OR_8$, -$C(O)NR_8R_9$, -$CH=NR_8$, -CN, -OR_8, -$OC(O)R_8$, -$S(O)_t$-R_8, -NR_8R_9, -$NR_8C(O)R_9$, -NO_2, -$N=CR_8R_9$, and halogen;

or together form, with the nitrogen atom to which they are attached, a substituted or unsubstituted, aromatic or non-aromatic heterocyclyl group;

n is selected from 1, 2, 3, 4, 5, 6, 7 and 8;

t is 0, 1 or 2;

$\mathbf{R_8}$ and $\mathbf{R_9}$ are each independently selected from hydrogen, substituted or unsubstituted alkyl, substituted or unsubstituted cycloalkyl, substituted or unsubstituted alkenyl, substituted or unsubstituted aryl, substituted or unsubstituted, aromatic or non-aromatic heterocyclyl, substituted or unsubstituted alkoxy, substituted or unsubstituted aryloxy, and halogen,

or a pharmaceutically acceptable salt, isomer or solvate thereof; and

wherein the SNRI is selected from the group consisting of venlafaxine and duloxetine, or a pharmaceutically acceptable salt, isomer or solvate thereof.

2. The synergistic combination according to claim 1, wherein R_1 is selected from H, -COR_8, and substituted or unsubstituted alkyl.

3. The synergistic combination according to any one of claims 1 or 2, wherein R_2 is H or substituted or unsubstituted alkyl.

4. The synergistic combination according to any one of claims 1 to 3, wherein R_3 and R_4 together with the phenyl group form a naphthyl ring system.

5. The synergistic combination according to any one of claims 1 to 4, wherein n is selected from 2, 3, and 4.

6. The synergistic combination according to any one claims 1 to 5, wherein R_5 and R_6 together form a morpholine-4-yl group.

7. The synergistic combination according to claim 1, wherein the sigma ligand of general formula (I) is selected from:

[1] 4-{2-(1-(3,4-dichlorophenyl)-5-methyl-1H pyrazol-3-yloxy)ethyl} morpholine,

[2] 2-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]-N,N-diethylethanamine,

[3] 1-(3,4-Dichlorophenyl)-5-methyl-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazole,

[4] 1-(3,4-Dichlorophenyl)-5-methyl-3-[3-(pyrrolidin-1-yl)propoxy]-1H-pyrazole,

[5] 1-{2-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]ethyl}piperidine,

[6] 1-{2-[1-(3,4-dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]ethyl}-1H-imidazole,

[7] 3-{1-[2-(1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy)ethyl]piperidin-4-yl}-3H-imidazo[4,5-b]pyridine,

[8]1-{2-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]ethyl}-4-methylpiperazine,

[9] Ethyl 4-{2-[1-(3,4-dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]ethyl} piperazine carboxylate,

[10] 1-(4-(2-(1-(3,4-dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy)ethyl)piperazin-1-yl)ethanone,

[11] 4-{2-[1-(4-Methoxyphenyl)-5-methyl-1H-pyrazol-3-yloxy]ethyl}morpholine,

[12] 1-(4-Methoxyphenyl)-5-methyl-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazole,

[13] 1-(4-Methoxyphenyl)-5-methyl-3-[3-(pyrrolidin-1-yl)propoxy]-1H-pyrazole,

[14] 1-[2-(1-(4-Methoxyphenyl)-5-methyl-1H-pyrazol-3-yloxy)ethyl]piperidine,

[15]1-{2-[1-(4-Methoxyphenyl)-5-methyl-1H-pyrazol-3-yloxy]ethyl}-1H-imidazole,

[16] 4-{2-[1-(3,4-Dichlorophenyl)-5-phenyl-1H-pyrazol-3-yloxy]ethyl} morpholine,

[17] 1-(3,4-Dichlorophenyl)-5-phenyl-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazole,

[18] 1-(3,4-Dichlorophenyl)-5-phenyl-3-[3-(pyrrolidin-1-yl)propoxy]-1H-pyrazole,

[19] 1-{2-[1-(3,4-Dichlorophenyl)-5-phenyl-1H-pyrazol-3-yloxy]ethyl}piperidine,

[20] 1-{2-[1-(3,4-Dichlorophenyl)-5-phenyl-1H-pyrazol-3-yloxy]ethyl}-1H-imidazole,

[21]2-{2-[1-(3,4-dichlorophenyl)-5-phenyl-1H-pyrazol-3-yloxy]ethyl}-1,2,3,4-tetrahydroisoquinoline,

[22] 4-{4-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]butyl} morpholine,

[23] 1-(3,4-Dichlorophenyl)-5-methyl-3-[4-(pyrrolidin-1-yl)butoxy]-1H-pyrazole,

[24] 1-{4-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]butyl}piperidine,

[25]1-{4-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]butyl}-4-methylpiperazine,

[26] 1-{4-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]butyl}-1H-imidazole,

[27] 4-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]-N,N-diethylbutan-1-amine,

[28]1-{4-[1-(3,4-dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]butyl}-4-phenylpiperidine,

[29] 1-{4-[1-(3,4-dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]butyl}-6,7-dihydro-1H-indol-4(5H)-one,

[30] 2-{4-[1-(3,4-dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]butyl}-1,2,3,4-tetrahydroisoquinoline,

[31] 4-{2-[1-(3,4-dichlorophenyl)-5-isopropyl-1H-pyrazol-3-yloxy]ethyl} morpholine,

[32]2-[1-(3,4-Dichlorophenyl)-5-isopropyl-1H-pyrazol-3-yloxy]-N,N-diethylethanamine,

[33] 1-(3,4-Dichlorophenyl)-5-isopropyl-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazole,

[34] 1-(3,4-Dichlorophenyl)-5-isopropyl-3-[3-(pyrrolidin-1-yl)propoxy]-1H-pyrazole,

[35] 1-{2-[1-(3,4-Dichlorophenyl)-5-isopropyl-1H-pyrazol-3-yloxy]ethyl} piperidine,

[36] 2-{2-[1-(3,4-dichlorophenyl)-5-isopropyl-1H-pyrazol-3-yloxy]ethyl}-1,2,3,4-tetrahydroisoquinoline,

[37] 4-{2-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]ethyl}morpholine,

[38] 2-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy] N,N-diethylethanamine,

[39] 1-(3,4-dichlorophenyl)-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazole,

[40] 1-{2-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]ethyl}piperidine,

[41] 1-(3,4-dichlorophenyl)-3-[3-(pyrrolidin-1-yl)propoxy]-1H-pyrazole,

[42] 1-{2-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]ethyl}piperazine,

[43] 1-{2-[1-(3,4-Dichlorophenyl)-5-methyl-1H-pyrazol-3-yloxy]ethyl}pyrrolidin-3-amine,

[44] 4-{2-[1-(3,4-Dichlorophenyl)-4,5-dimethyl-1H-pyrazol-3-yloxy]ethyl} morpholine,

[46]2-[1-(3,4-Dichlorophenyl)-4,5-dimethyl-1H-pyrazol-3-yloxy]-N,N-diethylethanamine,

[47] 1-(3,4-Dichlorophenyl)-4,5-dimethyl-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazole,

[48] 1-(3,4-Dichlorophenyl)-4,5-dimethyl-3-[3-(pyrrolidin-1-yl)propoxy]-1H-pyrazole,

[49] 1-{2-[1-(3,4-Dichlorophenyl)-4,5-dimethyl-1H-pyrazol-3-yloxy]ethyl} piperidine,

[50] 4-{4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]butyl}morpholine,

[51](2S,6R)-4-{4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]butyl}-2,6-dimethylmorpholine,

[52] 1-{4-[1-(3,4-Dichlorophenyl)-1H-pyrazol-3-yloxy]butyl}piperidine,

[53] 1-(3,4-Dichlorophenyl)-3-[4-(pyrrolidin-1-yl)butoxy]-1H-pyrazole,

[55] 4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]-N,N-diethylbutan-1-amine,

[56] N-benzyl-4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]-N-methylbutan-1-amine,

[57]4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]-N-(2-methoxyethyl)-N-methylbutan-1-amine,

[58] 4-{4-[1-(3,4-dichlorophenyl)-1H-pyrazol-3-yloxy]butyl}thiomorpholine,

[59]1-[1-(3,4-Dichlorophenyl)-5-methyl-3-(2-morpholinoethoxy)-1H-pyrazol-4-yl]ethanone,

[60]1-{1-(3,4-dichlorophenyl)-5-methyl-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazol-4-yl}ethanone,

[61] 1-{1-(3,4-dichlorophenyl)-5-methyl-3-[2-(piperidin-1-yl)ethoxy]-1H-pyrazol-4-yl}ethanone,

[62] 1-{1-(3,4-dichlorophenyl)-3-[2-(diethylamino)ethoxy]-5-methyl-1H-pyrazol-4-yl}ethanone,

[63] 4-{2-[5-Methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine,

[64] N,N-Diethyl-2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy] ethanamine,

[65] 1-{2-[5-Methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}piperidine, and

[66] 5-Methyl-1-(naphthalen-2-yl)-3-[2-(pyrrolidin-1-yl)ethoxy]-1H-pyrazole,

or a pharmaceutically acceptable salt, isomer or solvate thereof.

8. The synergistic combination according to claim 7, wherein the combination comprises 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine or a pharmaceutically acceptable salt, isomer or solvate thereof.

9. The synergistic combination according to any one of the preceding claims, wherein the combination comprises 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine hydrochloride.

10. The synergistic combination according to any one of the preceding claims, wherein the SNRI comprises venlafaxine or a pharmaceutically acceptable salt, isomer or solvate thereof.

11. The synergistic combination according to any one of claims 1 to 9, wherein the SNRI comprises duloxetine or a pharmaceutically acceptable salt, isomer or solvate thereof.

12. The synergistic combination according to any one of claims 1 to 8, wherein the combination comprises 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine or a pharmaceutically acceptable salt thereof and venlafaxine or a pharmaceutically acceptable salt thereof.

13. The synergistic combination according to any one of claims 1 to 8, wherein the combination comprises 4-{2-[5-methyl-1-(naphthalen-2-yl)-1H-pyrazol-3-yloxy]ethyl}morpholine or a pharmaceutically acceptable salt thereof and duloxetine or a pharmaceutically acceptable salt thereof.

14. The synergistic combination according to any one of the preceding claims for use as a medicament.

15. The synergistic combination according to any one of the preceding claims for use in the prophylaxis and/or treatment of pain.

16. The synergistic combination according to any one of the preceding claims for use in the prophylaxis and/or treatment of pain by potentiating the analgesic effect of the SNRI.
