

ABSTRACT

A demand amount acquisition unit 120 acquires a demand level for carbon credits. A method assignment unit 121: references a method database 100 in which a plurality of creation methods for creating carbon credits and the carbon credit creation ability of each of the plurality of creation methods are stored in association with each other, and a creator database 101 in which one or more carbon credit creators and the creation methods that each creator is capable of implementing are stored in association with each other; and assigns, within a range that each of the one or more creators can implement, one or more creation methods required to create carbon credits corresponding to the demand level.
