

TITLE OF THE INVENTION: WAFER CONTAINER HOUSING AND A WAFER CONTAINER TRANSFERRING METHOD

Abstract

A wafer container housing comprises a main frame defining a container storage space to accommodate a first wafer container for holding a first set of wafers, and the main frame having a size substantially the same as that of a second wafer container for holding a second set of wafers, wherein the first set of wafers have a diameter smaller than that of the second set of wafers; and a knob extending upward from a top portion of the main frame and engageable with an automated conveyer to allow for transfer of the wafer container housing by the automated conveyer.
