

METHOD AND APPARATUS FOR ADJUSTING SIZE OF LIST ITEM

Abstract

The present invention provides method and apparatus for adjusting size of a list item. The method may include obtaining, by a client application, a multi-touch event, adjusting the size of a head portrait control and the size of a contact panel control in the list item according to at least one event parameter in the multi-touch event. The apparatus for adjusting the size of the list item may include: an obtaining module for obtaining a multi-touch event; and an adjusting module for adjusting the size of a head portrait control and the size of a contact panel control in the list item according to at least one event parameter in the multi-touch event obtained by the obtaining module. Embodiments of the present invention are able to adjust a list item while ensuring the multi-touch event is compatible with existing operations, thus make the IM client easier to use.
