

## ABSTRACT

Embodiments of the present application disclose a palm scanning service provisioning method and a related apparatus. The method comprises: in response to a pre-provisioning operation triggered for a palm scanning service, displaying a palm input interface by means of a target application running in a terminal, wherein a target account is logged in the target application; displaying, in the palm input interface, an image collected by a camera of the terminal; and when it is determined that palm information of an object in the image meets a palm input condition, informing a server to record palm pre-input data corresponding to the target account, wherein the palm pre-input data is determined on the basis of the image, and the server is used for, when it is detected that a palm scanning device has collected palm data matching the palm pre-input data, provisioning the palm scanning service for the target account on the basis of the palm data. The method can improve the provisioning efficiency of a palm scanning service, improve the experience of a user provisioning the palm scanning service, and reduce related device deployment and maintenance costs.
