

METHOD OF CALCULATING ENERGY SAVING EFFECT AND ENERGY
SAVING EFFECT CALCULATION APPARATUS

5

Abstract of the Disclosure

10 A method of calculating an energy saving effect
used in an energy saving effect calculation apparatus
for calculating an energy saving effect of an energy
saving control based on an energy consumption amount
consumed at facilities in a pre-specified effect
calculation period, when the energy saving control in
the facilities is valid/invalid, includes switching
validity/invalidity of the energy saving control in the
15 facilities based on unit segments by an energy saving
control switching unit; recording an external condition
variable value, validity/invalidity of the energy
saving control, and an energy consumption amount on the
storage unit by a segment data recording unit; and
20 selecting a pair of a valid segment and an invalid
segment from the segment data, and calculating the
energy saving effect during the effect calculation
period.
