

ABSTRACT**MODULAR GLASSES AND METHOD FOR MANUFACTURING SAME**

A modular eyewear has two lenses (10) and a connection device (20).

Each lens (10) has a noncircular connection hole (12) defined through the lens

5 (10). The connection device (20) is mounted between and connected to the connection holes (12) in the lenses (10) to connect the lenses (10) with each other and has a bridge (22), two plugs (24), two sleeves (26) and two lens screws (28).

The bridge (22) is M-shaped and has two ends. The plugs (24) are mounted respectively around the ends of the bridge (22) and are mounted respectively in

10 the connection holes (122). The sleeves (26) are mounted respectively in the connection holes (12) and abut respectively on the plugs (24). The lens screws (28) are mounted respectively through the sleeves (26) and are screwed respectively with the plugs (24).
