

SESSION-BASED DESCRIPTION URL CUSTOMIZATION USING THE SESSION-BASED DASH OPERATIONS

ABSTRACT

A method and apparatus for providing video content may be provided. The method may include obtaining a pre-session-based description (PreSBD) information of a session instructing a PreSBD client to generate customized session-based description (SBD) document uniform resource locator (URL) for a plurality of SBD descriptors of the session. The method may further include instantiating the PreSBD client and passing PreSBD descriptor information. Then, the method may include controlling generation of a customized SBD document URL associated with a first SBD descriptor from the plurality of SBD descriptors of the session. The method may further include launching a first SBD client based on the customized SBD document URL and passing the first SBD descriptor.
