

ELECTRICAL CONNECTOR

ABSTRACT OF THE DISCLOSURE

5 An electrical connector includes at least one first differential pair including a pair of terminals and at least one first ground terminal juxtaposed to the at least one first differential pair. Each of the pair of terminals and the at least one ground terminal includes a contact portion, a solder tail portion, and an extension portion extending between the contact portion and the solder tail portion. The extension portions of the terminals and the ground terminal can be arranged in a staggered and partially
10 overlapping manner.
