

Messaging System And Method For Communicating With Healthcare Personnel In A Healthcare Environment

ABSTRACT

5

A messaging system and method for communicating with healthcare personnel in a healthcare environment. The system comprises a messaging server for facilitating sending and receiving messages to and from mobile communication devices over a mobile communication network; a message logger database coupled to the messaging server for logging the messages for verification of messages sent and received; and one or more healthcare information databases coupled to the messaging server; wherein the messaging server facilitates the sending and receiving of the messages based on information in the one or more healthcare databases.
