STROLLER FOLDABLE IN THREE

ABSTRACT

A stroller (10) is provided with a handle (15) having a horizontal middle part (30) and two side pipes (18). The two side pipes (18) are connected to the horizontal middle part (30) by gear trains (31, 34) so as to be turnable about axes perpendicular to the axis of the horizontal middle part (30), respectively. A folding part operating mechanism (25) is incorporated into the horizontal middle part (30) of the handle (15). The side pipes (18) can be folded and unfolded relative to the horizontal middle part (3) by turning the horizontal middle part (30) about its axis.
