

Abstract

An object of the present invention is to provide an ampoule guide and a drug solution
5 administering unit having excellent stability. The above object is solved by an ampoule guide (30)
which is provided with a hollow cylindrical guard (31) at a tipping portion and which
accommodates therein an ampoule (20); a drug solution administering unit provided with an
ampoule guide (30) which is provided with a hollow cylindrical guard (31) at a tipping portion and
which accommodates therein an ampoule (20), a gasket (40) which is set within the ampoule (20)
10 for accommodating and pushing out a drug solution, and a plunger activating portion (50) provided
with a push-out mechanism for pushing out the gasket (40); and the like.
