(54) Title: CODING TIMING INFORMATION FOR VIDEO CODING

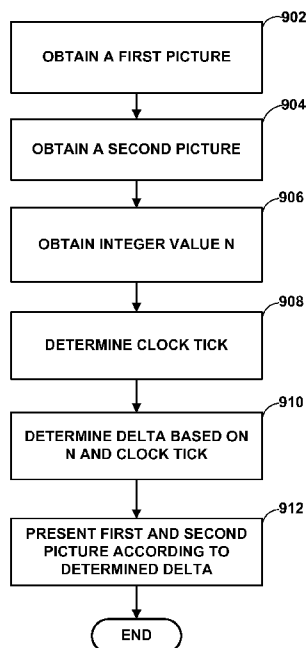

FIG. 9

(57) Abstract: In one example, a device for presenting video data includes a processor configured to determine an integer value for the video data, determine a difference value between a presentation time of a first picture and a presentation time of a second picture, wherein the difference value is equal to the integer value multiplied by a clock tick value, and present the first picture and the second picture according to the determined difference value.

— *as to the applicant's entitlement to claim the priority of
the earlier application (Rule 4.17(iii))*
