

ABSTRACT OF THE DISCLOSURE (FIG. 8)

"MAGNETIC RECORDING/READING APPARATUS"

Disclosed is a magnetic recording/reading apparatus comprising a ramp formed of a material having at least 30% of a tensile elongation as defined by ASTM D638. The distance $\underline{c}$, which is defined as the length between a ramp and a tab measured at the point $\underline{a}/3$ apart from the contact portion, $\underline{a}$ being the contact width of the ramp and the tab, is $0.0015a$, or at least $0.015 \mu\text{m}$ where $\underline{a}$ is 10 to $50 \mu\text{m}$.
