

ABSTRACT
HAIR STYLING DEVICE

This invention relates to a hair styling device. According to one aspect of the invention the hair styling device comprises a body defining a chamber adapted to accommodate a length of hair, the chamber having a primary opening through which the length of hair may enter the chamber; a rotatable element adapted to engage the length of hair adjacent to the primary opening; an elongate member around which, in use, the length of hair is wound by the rotatable element; a guide part adapted to guide the length of hair towards the primary opening, the rotatable element being rotatable relative to the guide part, the guide part being movable relative to the body. The movable guide part may also serve to press the length of hair towards the primary opening.
