

Abstract

METHOD FOR TRANSMITTING SIGNAL, NETWORK DEVICE AND TERMINAL DEVICE

5

Embodiments of the application provide a method for signal transmission, a network device and a terminal device, which can reduce the complexity and power consumption of searching for PDCCH by the terminal device. The method includes: determining, by the network device, first configuration information, wherein the first configuration information is used for indicating a first time domain resource and a first time domain granularity corresponding to the first time domain resource, wherein the first time domain resource and the first time domain granularity are used for the terminal device to search for a downlink control channel on the first time domain resource by taking the first time domain granularity as a cycle; and transmitting, by the network device, the first configuration information to the terminal device.
