

ABSTRACT

ELECTRIC FIELD GENERATING DEVICE AND COLD STORAGE PROVIDED
WITH SAME

An electric field generating device (30) includes an electrode (31) and a voltage applying device (32) that applies a voltage to the electrode (31). The electric field generating device (30) is configured to generate an electric field in an indoor space (S) of a container (5). The electric field generating device (30) is provided with a supporting member (33) that supports the electrode (31) to be movable between a predetermined use position at which an electric field can be generated in the indoor space (S) of the container (5) and a predetermined housing position that differs from the use position, and a fixing member (34) that fixes the electrode (31) immovably at the use position.
