

ABSTRACT**Universal joint sealing tape for different profile dimensions and seal arrangement having such a joint sealing tape**

A joint sealing tape is described, which can be universally used for different profile dimensions, for sealing building joints, particularly for sealing them with regard to noise and/or smoke and with regard to fire, if applicable. In particular, a joint sealing tape for sealing a joint between a first component and a second component is described, having an elongated connection element and at least two sealing elements, which are positioned on the connection element at a distance from and next to one another, running in the longitudinal direction of the connection element, and wherein the connection element has a perforation.

Furthermore, a sealing arrangement for sealing building joints, particularly for sealing them with regard to noise and/or smoke and with regard to fire, if applicable, having such a joint sealing tape is described.
