

STEERING ASSEMBLY FOR MEANS OF TRANSPORT

ABSTRACT

5 A steering assembly for means of transport comprises at least one truck
(2) supported by a supporting structure (3) which is rigidly coupled to the
means of transport and has, in an upward region, a central center bearing (5)
for the coupling of at least one axle (12, 13) so as to allow rotation about a
vertical axis (10, 11); the axle (12, 13) has, at its two ends, wheels (14)
10 which rest on the ground or on another support; the wheels (14) are
provided with electric or hydraulic motors (15) or the like which are
controlled by electric and/or electronic control means and are adapted to
produce the rotation of the axle (12, 13).
