(54) Title: PLASTIC SYRINGE WITH OVERCAP

(57) Abstract

A plastic pre-filled syringe (1) which includes an open ended barrel (2) sealed at one end by a moveable stopper (3) and sealed at the other end by a closure (4) frangibly connected to the syringe and an overcap (6) shaped to fit over at least the end of the closure; said overcap including closure retention means adapted to hold and retain at least the end of the closure such that upon removal of the overcap from the rest of the syringe the closure will be separated from the syringe so to reveal the contents for injection.
