

STORAGE FACILITY

ABSTRACT OF THE DISCLOSURE

5 The control device executes first control and second control in response
to a malfunction occurring in a storage section 91. The first control is control
to stop traveling of both a first shuttle 11 and a second shuttle 12 in a
malfunctioning storage layer 90A, which is a storage layer 90 that includes a
malfunctioning storage section 91A, which is a storage section 91 in which the
10 malfunction has occurred. The second control is control to prohibit the first
shuttle 11 from entering an immediately above storage section 91B, which is a
storage section 91 that is immediately above the malfunctioning storage
section 91A, in an upper adjacent storage layer 90B, which a storage layer 90
that is adjacent, on an upper side Z1, to the malfunctioning storage layer 90A.
