(54) Title: DEVICE SPECIFIC CONTENT INDEXING FOR OPTIMIZED DEVICE OPERATION

(57) Abstract: Generation of an index database that is customized for a specific responder device using device parameters of the responder device is provided. The index database is generated on a device other than the responder device. In accordance with one method, an indication of a selection of objects is received. Device parameters of the responder device are also accessed. An index database is generated for the selection of objects using the device parameters of the responder device. The index database may then be transferred to the responder device.
