ABSTRACT OF THE DISCLOSURE (FIG. 3)

"MAGNETIC RECORDING MEDIA, MAGNETIC
RECORDING APPARATUS, AND STAMPER"

5

A magnetic recording media has a magnetic layer
formed on a substrate and includes data regions
including a magnetic pattern constituting a recording
track and servo regions including magnetic patterns
used as address bits, the data regions and the servo
regions being contained in a plane of the magnetic
layer. In a case where two magnetic patterns used
as address bits on the servo regions corresponding to
two adjacent recording tracks are arranged in such a
manner that one corner of one of the magnetic patterns
is closest to one corner of the other, the corners
of the two magnetic patterns are substantially joined
together.
