ABSTRACT

A method, an apparatus, a device, and a storage medium for material presentation are provided. The method includes: presenting, in response to a creation material presentation operation, a material presentation interface in a predetermined creation interface corresponding to a predetermined object, where the predetermined object is configured to create a media work; displaying search information in a predetermined search area in the material presentation interface, where the search information is associated with the predetermined object; and presenting material information of a first material in a first predetermined presentation area in the material presentation interface, where the first material includes a material matching the search information in a predetermined material library corresponding to the material presentation interface.
