

ABSTRACT

IC CARD, PORTABLE ELECTRONIC DEVICE, PROGRAM, PROCESSING
APPARATUS, AND PROCESSING SYSTEM

5

According to one embodiment, according to one
embodiment, an IC card executing a command from a
processing apparatus includes a communication unit and a
processing unit. The communication unit transmits/receives
10 data to/from the processing apparatus. Upon receiving,
through the communication unit, a first command requesting
transmission of data in a first frame not including a start
code or an end code, the processing unit transmits data in
the first frame through the communication unit.
