

CABLE BODY ANCHORING FITTING

ABSTRACT

This invention relates to a fitting (cable body anchoring fitting) using a wedge, which provides a cable body anchoring fitting having a greater fastening force by a wedge shape that is not conventionally available.

A cable body anchoring fitting 1 includes a fitting member 11 including a cylindrical body portion into which a cable body 2 is inserted, and a driving member 12 having a wedge-shaped portion to be inserted into the cylindrical body portion and abutting the cable body 2 in the cylindrical body portion, in which an inclination surface of the wedge-shaped portion has an inclination at an inclination axis along a driving direction of the driving member 12.
