(54) Title: ORDER PROCESSING BASED ON NEAR-FIELD COMMUNICATION

(54) 发明名称: 基于近场通信的订单处理

S202 Call a near-field communication component to cooperate with a merchant device of a merchant to establish a near-field communication connection, and receive, by means of the near-field communication connection, settlement information sent by the merchant device

S204 Send the settlement information to a server, so as to perform an identity credential query and acquire identity credential data corresponding to a user's identity credential state at the merchant

S206 On the basis of settlement instruction and the identity credential data, which is issued by the server, perform page rendering and display, and on the basis of the displayed identity credential page, cooperate with the server to perform identity credential processing

S208 If a settlement instruction based on an identity credential is detected, redirect to a merchant subroutine and send the settlement information and a user identifier, so as to perform order confirmation and order payment in the merchant subroutine

(57) Abstract: Provided in the embodiments of the present disclosure are an order processing method and apparatus based on near-field communication. The order processing method based on near-field communication comprises: during order processing, calling a near-field communication component to cooperate with a merchant device of a merchant to establish a near-field communication connection, and receiving, by means of the near-field communication connection, settlement information sent by the merchant device; sending the settlement information to a server, so as to perform an identity credential query and acquire identity credential data corresponding to a user's identity credential state at the merchant; on the basis of settlement instruction and the identity credential data, which is issued by the server, performing page rendering and display, and on the basis of the displayed identity credential page, cooperating with the server to perform identity credential processing; and if a settlement instruction based on an identity credential is detected, redirecting to a merchant subroutine and sending the settlement information and a user identifier, so as to perform order confirmation and order payment in the merchant subroutine.

本国际公布:

— 包括国际检索报告(条约第21条(3))。

(57) 摘要: 本公开实施例提供了基于近场通信的订单处理方法及装置, 其中, 一种基于近场通信的订单处理方法包括: 在进行订单处理的过程中, 调用近场通信组件与商户的商户设备配合建立近场通信连接, 并通过近场通信连接接收商户设备发送的结算信息, 向服务器发送结算信息, 以进行身份凭证查询并获取用户在商户的身份凭证状态对应的身份凭证数据, 根据结算指令和服务器下发的身份凭证数据进行页面渲染展示, 并基于展示的身份凭证页面与服务器配合进行身份凭证处理, 若检测到基于身份凭证的结算指令, 向商户子程序跳转并发送结算信息和用户标识, 以在商户子程序进行订单确认和订单支付。
