CLAIMS

1. Use of a composition of Potassium Bicarbonate and D-Ribose in the manufacture of an intramuscular injectable drug for the treatment of cell degeneration in the oncologic field for degenerative diseases caused by particular conditions of stress.

2. Use of a composition according to claim 1, characterized in that the composition comprises two parts of Potassium Bicarbonate and a part of D-Ribose.

3. Use of a composition according to claim 1, characterized in that the composition comprises three parts of Potassium Bicarbonate and a part of D-Ribose.

4. Use of a composition according to claim 1, characterized in that the composition comprises four parts of Potassium Bicarbonate and a part of D-Ribose.

5. Use of a composition according to one of the claims 1 to 4, characterized in that the components of said compound are in single doses for each component, associable at the time of use, in order to obtain an extemporaneous solution of a drug.

6. Use of a composition according to one of the claims 1 to 5 in the manufacture of an intramuscular injectable drug for the treatment of cell degeneration in the oncologic field for degenerative diseases caused by the exposure to ionizing radiations.

7. Use of a composition according to one of the claims 1 to 5 in the manufacture of an intramuscular injectable drug for the treatment of cell degeneration in the oncologic field for degenerative diseases caused by the exposure to UV.

8. Use of a composition according to one of the claims 1 to 5 in the manufacture of an intramuscular injectable drug for the treatment of cell degeneration in the oncologic field for degenerative diseases caused by cellular damages caused by toxic molecules.
