

Abstract

The present invention provides a novel bridged artificial nucleic acid and an oligomer containing the same as a monomer. The present invention provides specifically
 5 a compound represented by general formula (I) (wherein each symbol is the same as defined in the specification) or salts thereof; as well as an oligonucleotide compound represented by general formula (I') (wherein each symbol is the same as
 10 defined in the specification) or salts thereof.

(I)

(I')
