ABSTRACT

METHODS FOR TREATMENT OF A SARCOMA USING AN EPIMETABOLIC SHIFTER (COENZYME Q10)

Methods and formulations for treating a sarcoma in humans using an epimetabolic shifter, such as Coenzyme Q10, a building block of CoQ10, a derivative of CoQ10, an analog of CoQ10, a metabolite of CoQ10, or an intermediate of the coenzyme biosynthesis pathway, are described. Methods for assessing the efficacy of treatment of, diagnosing, and prognosing sarcoma are also provided.
