

[Abstract]

[Title]

Supplemental liquid comprising dietary fiber

[Problems to be solved]

The object of the present invention is to provide a novel supplemental liquid, which can easily and rapidly supplement required amounts of substances such as sodium chloride in enteral feeding, and which can be generally applied to a number of subjects in a variety of circumstances.

[Means for solving problems]

The present invention relates to a supplemental liquid for enteral feeding, consisting of mineral components, water and dietary fiber, and to a supplemental liquid in container, wherein the container holding the supplemental liquid is heat sterilized.
