

ABSTRACT

A bag bundle including bundled umbrella bags each capable of accommodating an umbrella in a bag structure, includes a sheet-like first bag portion, a sheet-like second bag portion that is opposed
5 to the first bag portion and constitutes the bag structure; a sheet-like extension that is extended further upward from a top end of the second bag portion; and an engagement portion that is located on the extension and capable of vertical engagement with the umbrella K. This provides an umbrella bag bundle applicable
10 to various umbrellas without increasing the length of the entire umbrella bag bundle.
