

Abstract**APPARATUS FOR WASHING ARTICLES AND DRYING MODULE
THEREFOR**

5

There is proposed a drying module (230) for an industrial washing apparatus (200) comprising at least one washing module (40, 45, 60), the drying module (230) being configured to receive washed articles (12) from the at least one washing module (40, 45, 10 60) and to dry the washed articles (12); the drying module (230) comprising: a conveyor (240) which is configured to move the washed articles (12) along a transport path comprising a first substantially helical section (242a) to transport the washed articles (12) from a first height (254) to a second height (256). Also proposed is an apparatus including the drying module, and a method of drying washed articles.
