(54) Title: SYSTEM AND METHOD FOR IMPLEMENTING A KEY-CODE BASED MONEY TRANSFER

(57) Abstract: A system includes a processor and a non-transitory computer readable medium coupled to the processor. The non-transitory computer readable medium comprises code that when executed by the processor, causes the processor to receive a money transfer amount indicative of an amount of funds to be transferred to a recipient. The processor generates a key code associated with the money transfer amount that is provided to a user of the system and given to the recipient by the user. The key code is programmed by the processor to enable the recipient to use the key code to redeem the amount of funds associated with the money transfer amount.
