

ABSTRACT

Provided in the present disclosure are a video playing progress control method, apparatus and device, and a storage medium. The method comprises: in response to a long-press operation acting on a preset playing control area on a video playing page of a first video, entering a pure video playing mode; and on the basis of the pure video playing mode, continuing playing the first video on the video playing page according to a preset fast-forward playback speed, wherein the preset playing control area is determined on the basis of a display position of a playing control progress bar, and the pure video playing mode is used for hiding the display of functional controls on the video playing page. Thus, in the embodiments of the present disclosure, a video fast-forward playing function based on a pure video playing mode can be triggered by means of a long-press operation acting on a preset playing control area on a video playing page, thereby enriching interaction functions during a video playing process, and improving the video watching experience of a user.
