

Abstract

A pharmaceutical composition of a benzo nitrogen heteroaromatic ring derivative and the use thereof in medicine. The pharmaceutical composition contains active ingredient A and a pharmaceutical excipient, wherein the active ingredient A is selected from a compound as represented by general formula (I) or a stereoisomer, tautomer, deuterated compound, solvate, prodrug, metabolite, pharmaceutically acceptable salt or cocrystal thereof. The pharmaceutical composition contains 1-1000 mg of the active ingredient A, and the content of the active ingredient A is selected from 1.0-90.0%. The present disclosure also relates to the use of the pharmaceutical composition in the preparation of a related drug for treating nephropathy.
