(54) Title: INTERACTIVE PRINTER

(57) Abstract: A printer (601), including an input module and a printing module, for printing a second interface onto a second surface, in response to first indicating data received from a stylus sensing device and sensed by the stylus from first coded data (3). A first interface is disposed on a first surface, and includes the first coded data. The input module receives the first indicating data from the stylus, the first indicating data being at least partially indicative of response data. The input module generates second indicating data based on the first indicating data, the second indicating data being at least partially indicative of the response data. The second indicating data is sent to a computer system. The printing module receives the response data from the computer system. The second interface is based at least partially on the response data. The printing module prints the second interface onto the second surface.
