

SDK REPAIR METHOD AND APPARATUS, TERMINAL, DEVICE, SYSTEM, AND MEDIUM

ABSTRACT

The present application relates to the field of data processing. Disclosed are an SDK repair method and apparatus, a terminal, a device, a system, and a medium. The method comprises: according to SDK information, host information, and SDK anomaly information of each anomaly type, obtaining an anomaly impact parameter corresponding to each anomaly type of a target SDK, wherein the target SDK corresponds to a host program indicated by the host information and an SDK version indicated by the SDK information; obtaining a target SDK repair policy on the basis of the anomaly impact parameter corresponding to each anomaly type of the target SDK and a preset anomaly grading processing rule, wherein the target SDK repair policy comprises an SDK repair policy of an anomaly level, in the anomaly grading processing rule, corresponding to the anomaly impact parameter; and delivering the target SDK repair policy to a user terminal, so that the user terminal executes the target SDK repair policy to repair the target SDK.
